Update on osteoporosis

Wat is uw **gemiddelde** inname van ...?
(graag ingevuld meebrengen op uw volgende raadpleging metabole botziekten)

1) Melk, een glas of tas? (150 ml)

Zowel volle, halfvolle of magere melk; ook karnemelk, chocomelk, calciumverrijkte sojadrink, enz.

..... keer per (=> per dag of per week)

2) Yoghurt, pudding of platte kaas, een potje? (125 g)

Zowel volle, halfvolle of magere natuur- of fruityoghurt; ook chocolade of vanillepudding, enz.

..... keer per (=> per dag of per week)

3) Kaas of kaasgerecht, een snede of portie? (30 g)

Ook b.v. een quiche, lasagne of pizza met kaas, ...

..... keer per (=> per dag of per week)

4) Fles- of kraantjeswater: glazen per dag (200ml)

Contrex/Hépar water: glazen per dag

5) Appelsienen:

..... stuks per dag

6) Kan u heel weinig eten? (bv. door een ernstige ziekte) **NEE / JA**

7) Eet u (bijna) dagelijks groenten, fruit én bruin/grijs brood?

NEE / JA

8) Gebruikt u andere calciumrijke voeding, bijvoeding, etc? **NEE/ JA:**

.....

9) Gebruikt u calcium supplementen? **NEE/ JA, namelijk:**

- 500 mg 1x/dag 500 mg 2x/dag
- 1000 mg 1x/dag Calx Plus® keer/dag
- Andere, namelijk: (soort, dosis)

Puntentelling (in te vullen door assistent)

1) Melk: Minder dan 3x/week 0 punten
3-4 keer per week 1 punt
.... keer per dag, x2 punten = punten

2) Yoghurt: Minder dan 3x/week 0 punten
3-4 keer per week 1 punt
.... keer per dag, x2 punten = punten

3) Kaas: aantal per week x 0.5 punten = punten

4) Water: 1 glas/dag 0 punten
2-3 glazen/dag 0.5 punt
4-5 glazen/dag 1 punt
6-8 glazen/dag 1.5 punt
9-10 glazen/dag 2 punten

Meer, namelijk glazen/dag x 0.222... punten = afgerond...

Contrex/Hépar: glazen/dag x 1 punt = punten

5) Appelsienen: stuks/dag x 0.5 punt = punten

6) Weinig eten: Indien NEEN +3 punten

7) Groenten, fruit & bruin/grijs brood: Indien JA als beiden voldaan

8) Indien JA => calciumcontent opzoeken, zoniet onderschatting

9) Calcium supplementen:

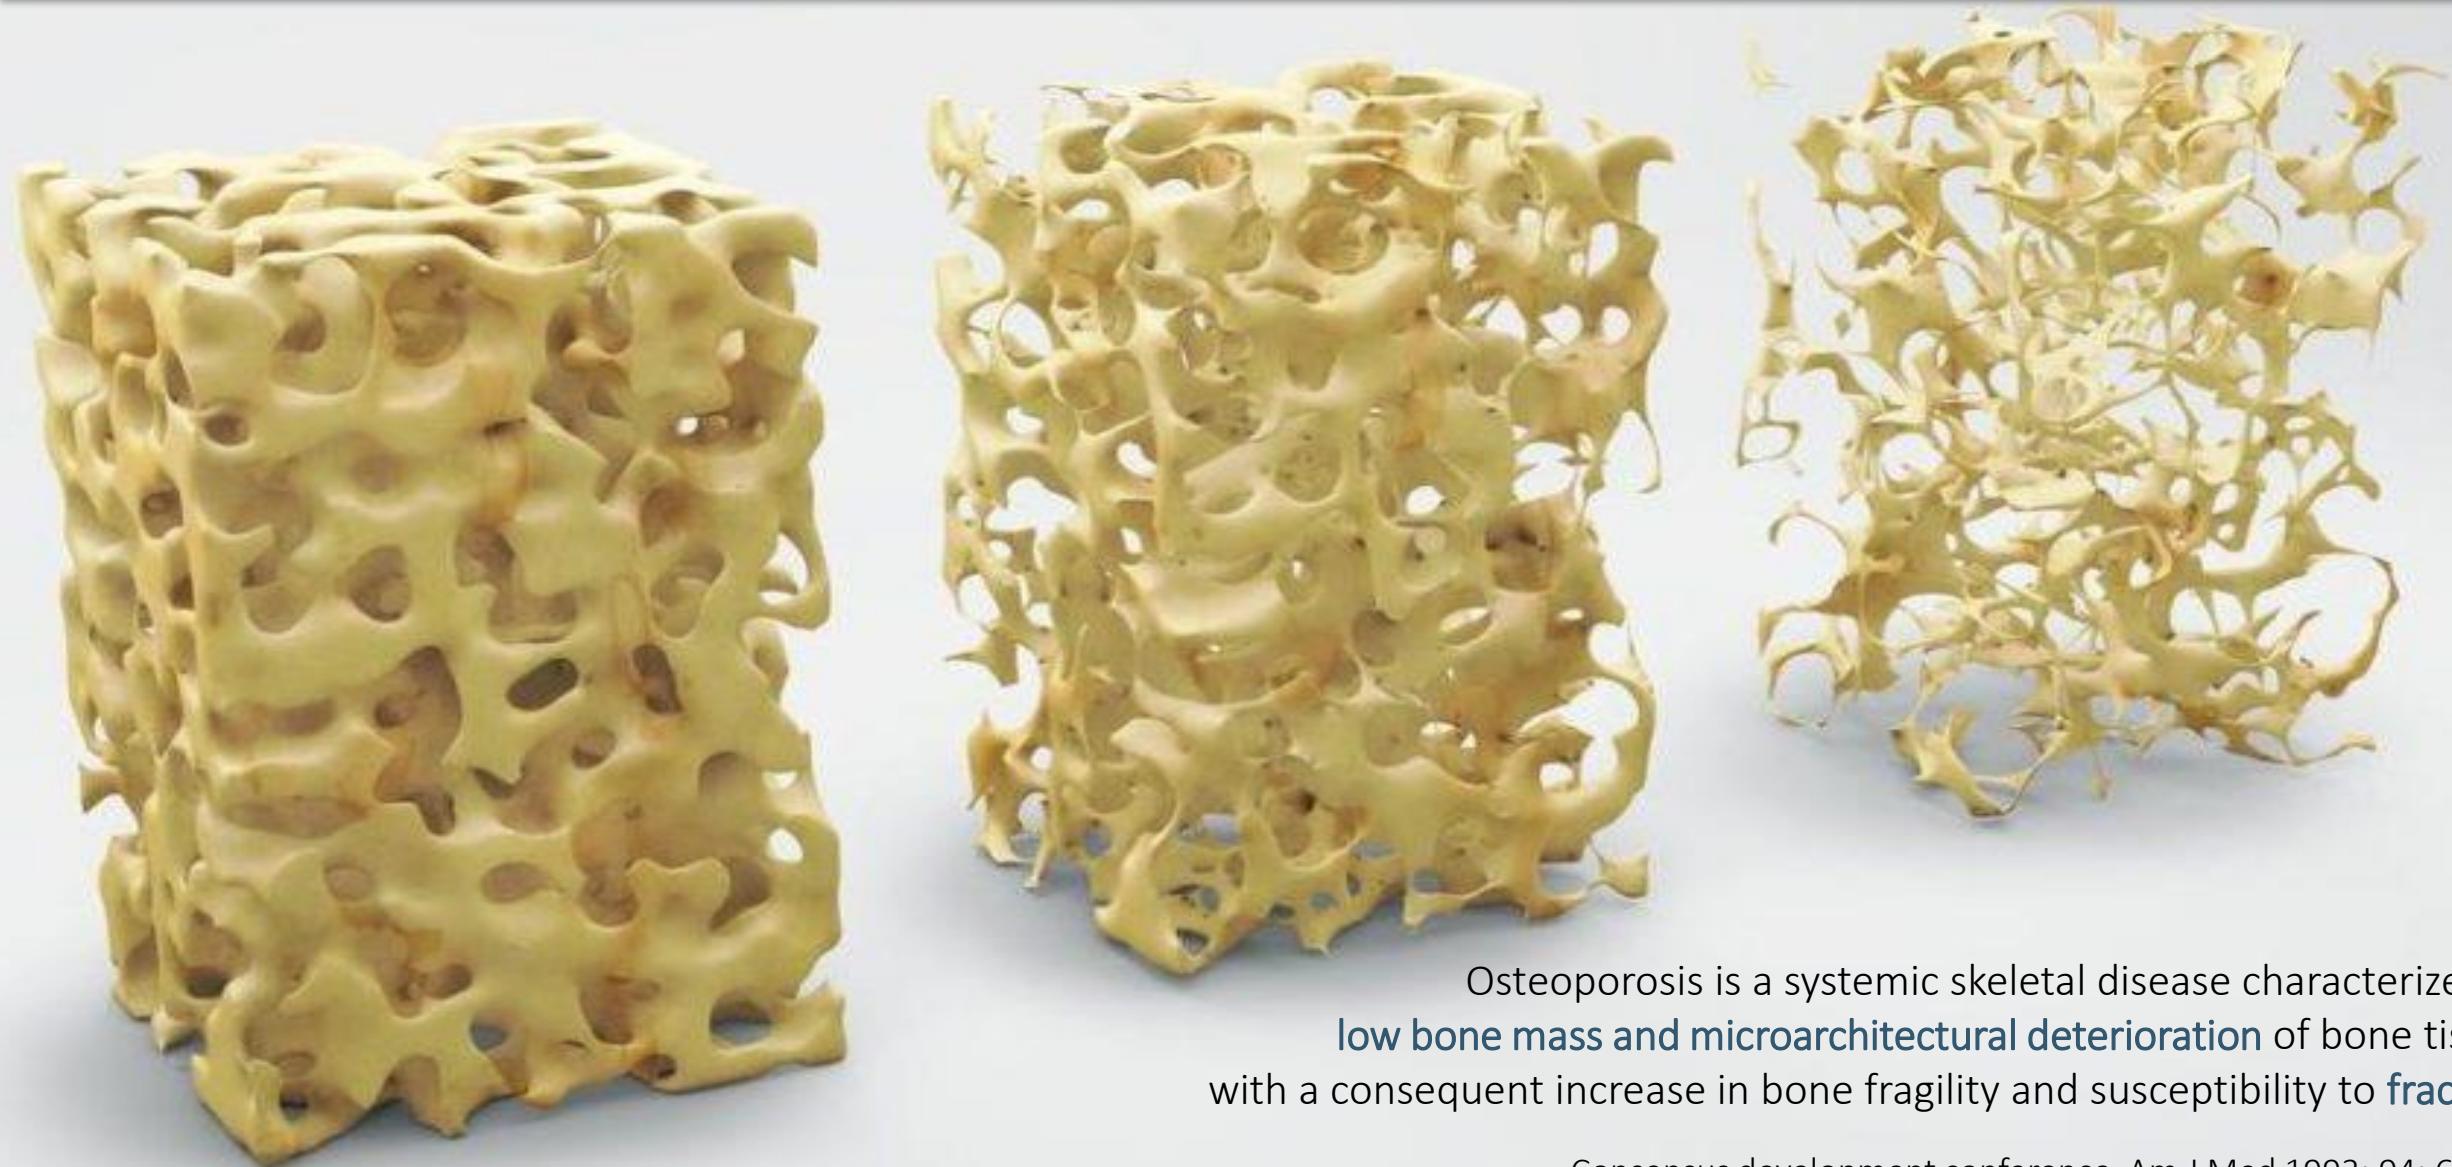

500 mg = 5.5 punten

1000 mg of 2x500 mg = 11 punten

Calx plus® = bonbons x 6.5 punten = punten

Totale score:

Osteoporosis

Osteoporosis is a systemic skeletal disease characterized by **low bone mass and microarchitectural deterioration** of bone tissue, with a consequent increase in bone fragility and susceptibility to **fracture**.

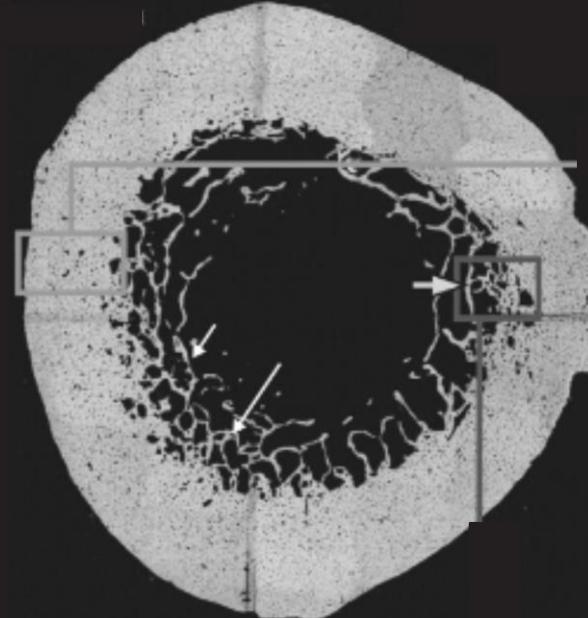

Consensus development conference. Am J Med 1993; 94: 646-50

Osteoporosis

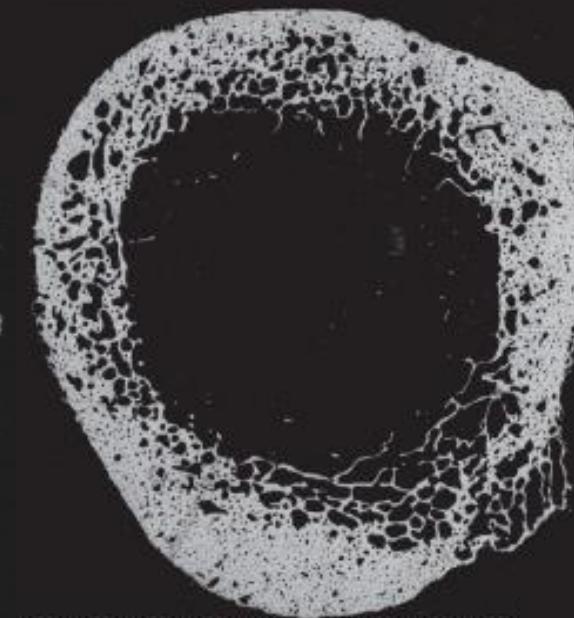

Age-related bone loss and cortical porosity

29 years

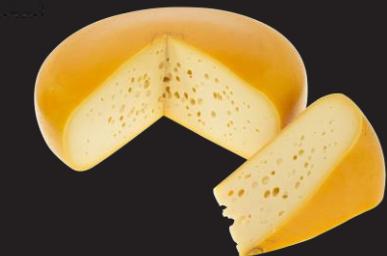

78 years

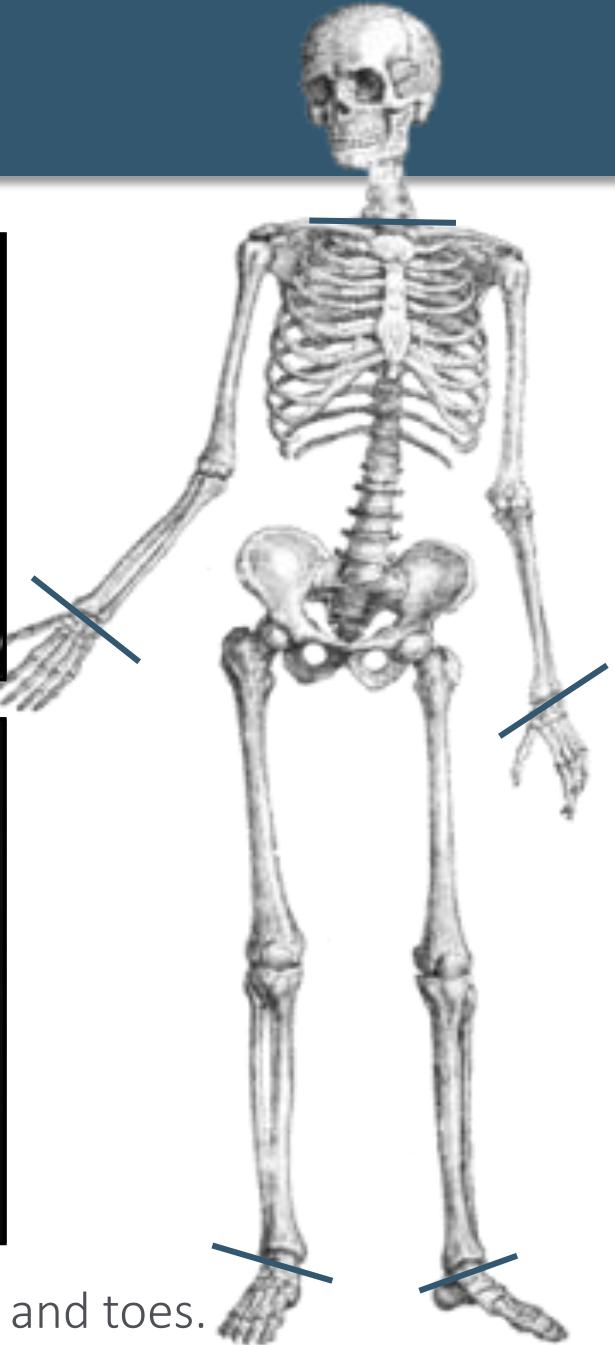

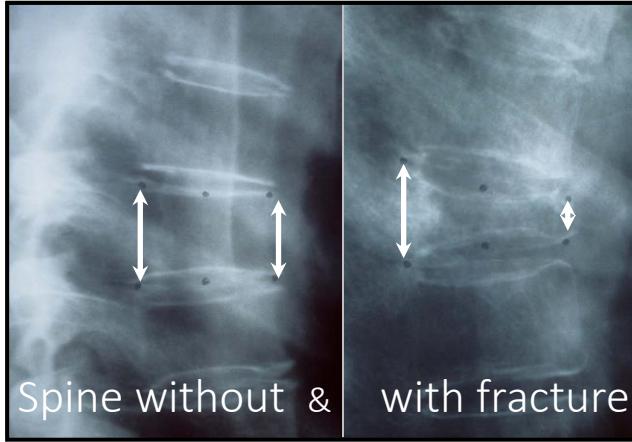

90 years

Post-mortem femur specimens of women

Osteoporotic fractures

Osteoporotic fractures may affect **any part of the skeleton** except face, skull, fingers and toes.

Consequences of osteoporotic fractures

Hip fractures

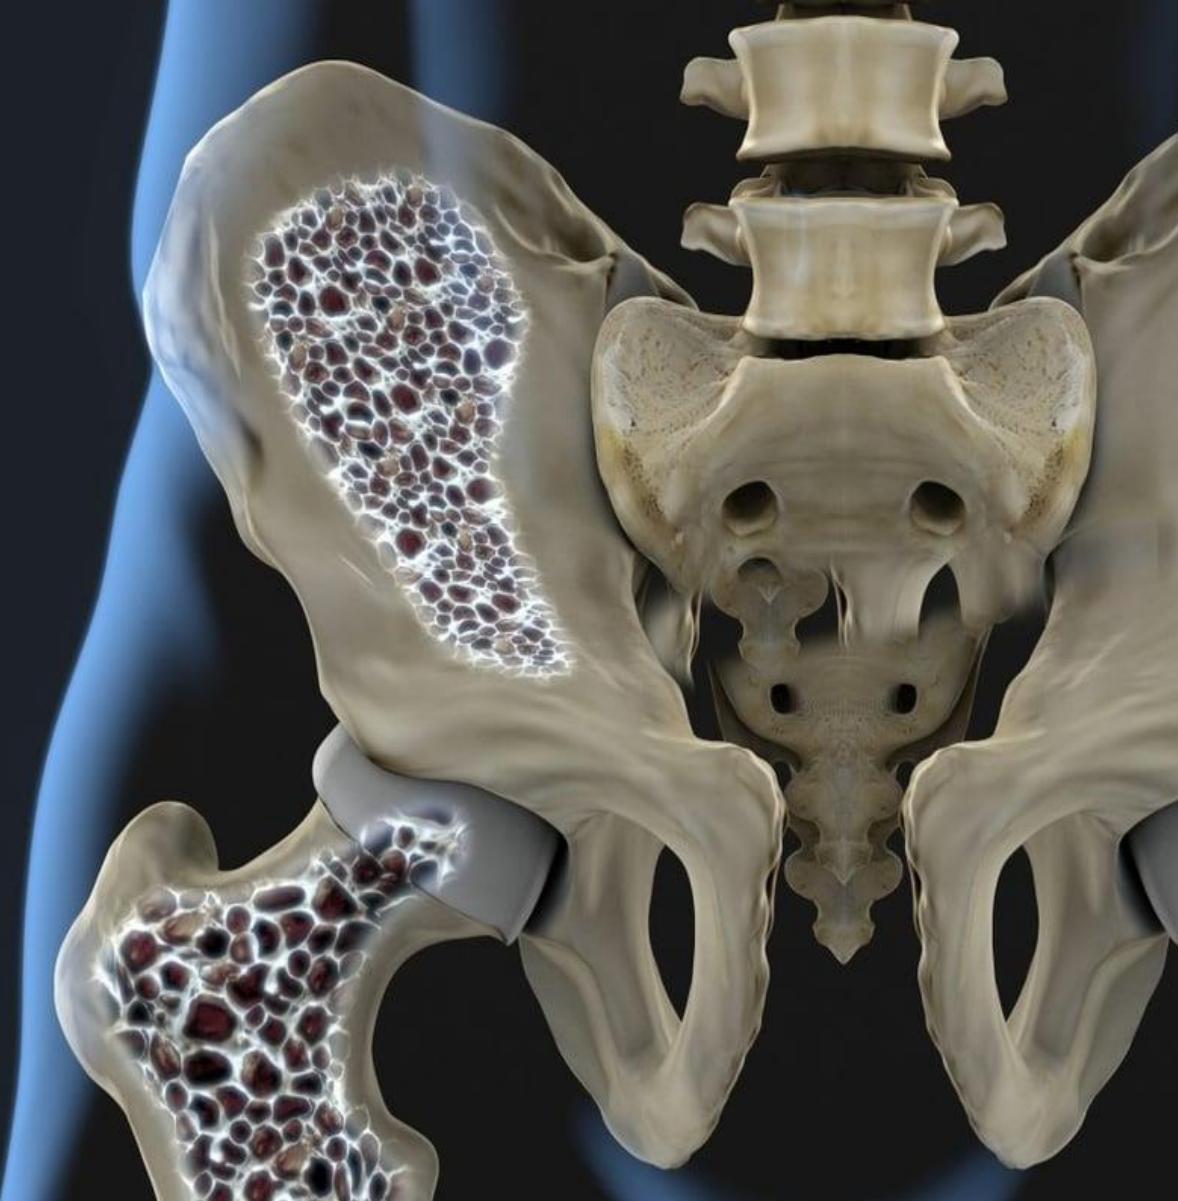

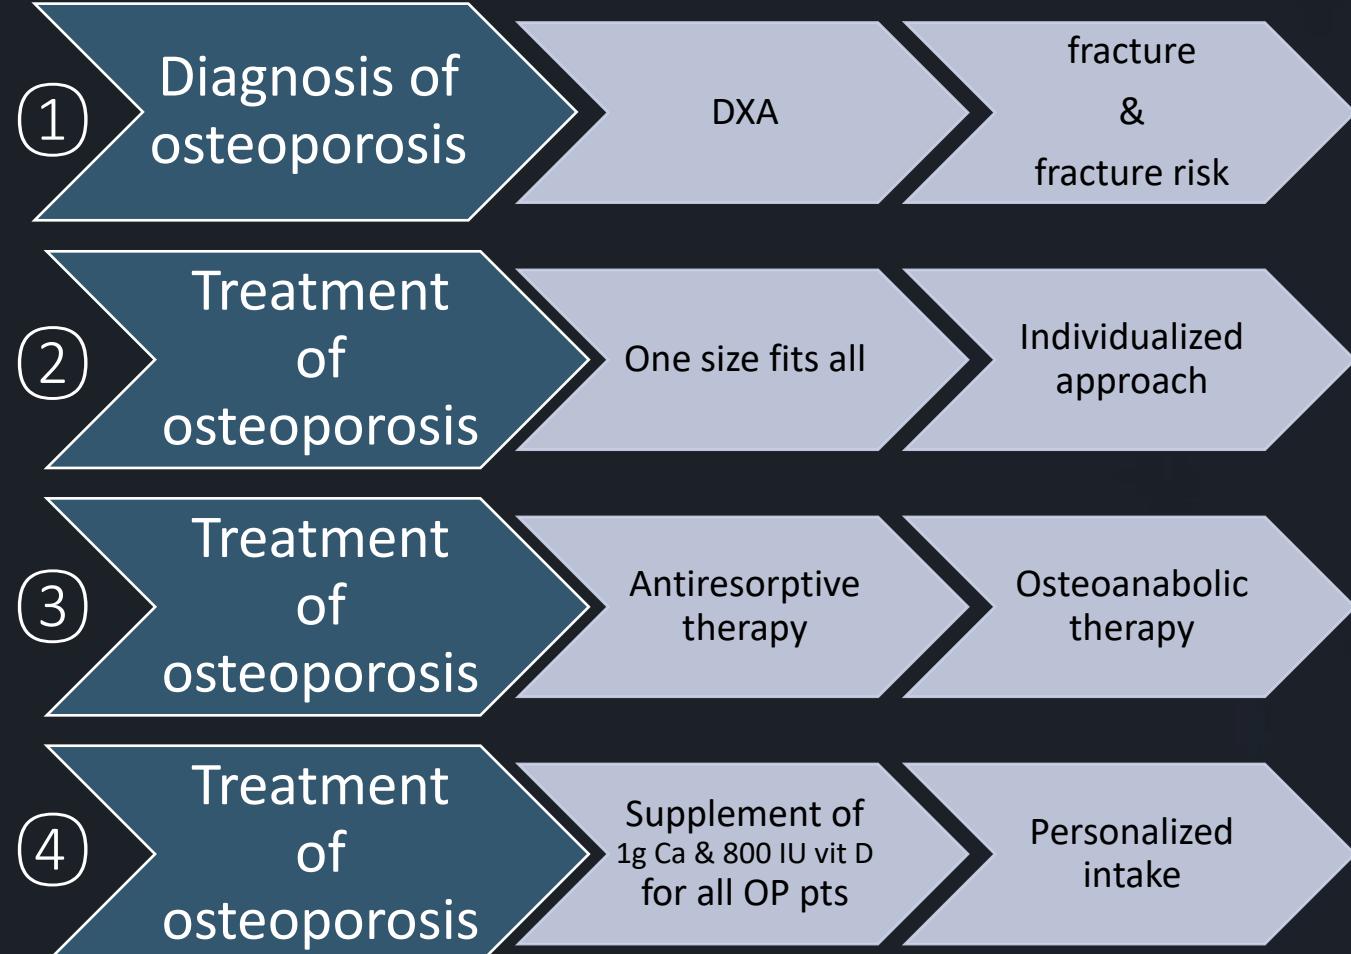

- **Functional decline:** 80% of hip fracture patients still have problems with activities of daily living (ADL) after 1 year
- **Mobility:** >40% of previously independent hip fracture patients are not able to walk independently after 1 year
- **Institutionalization:** 10-20% of hip fracture patients newly institutionalized over 1 year (up to 35% in ≥ 90 years)
- **Quality of life:** significant loss in all domains of the SF-36 at hospital discharge and at 1 year
- **Mortality:** 19% of hip fracture patients over 1 year versus 3% in age- and residence-matched controls (in men: 30%)

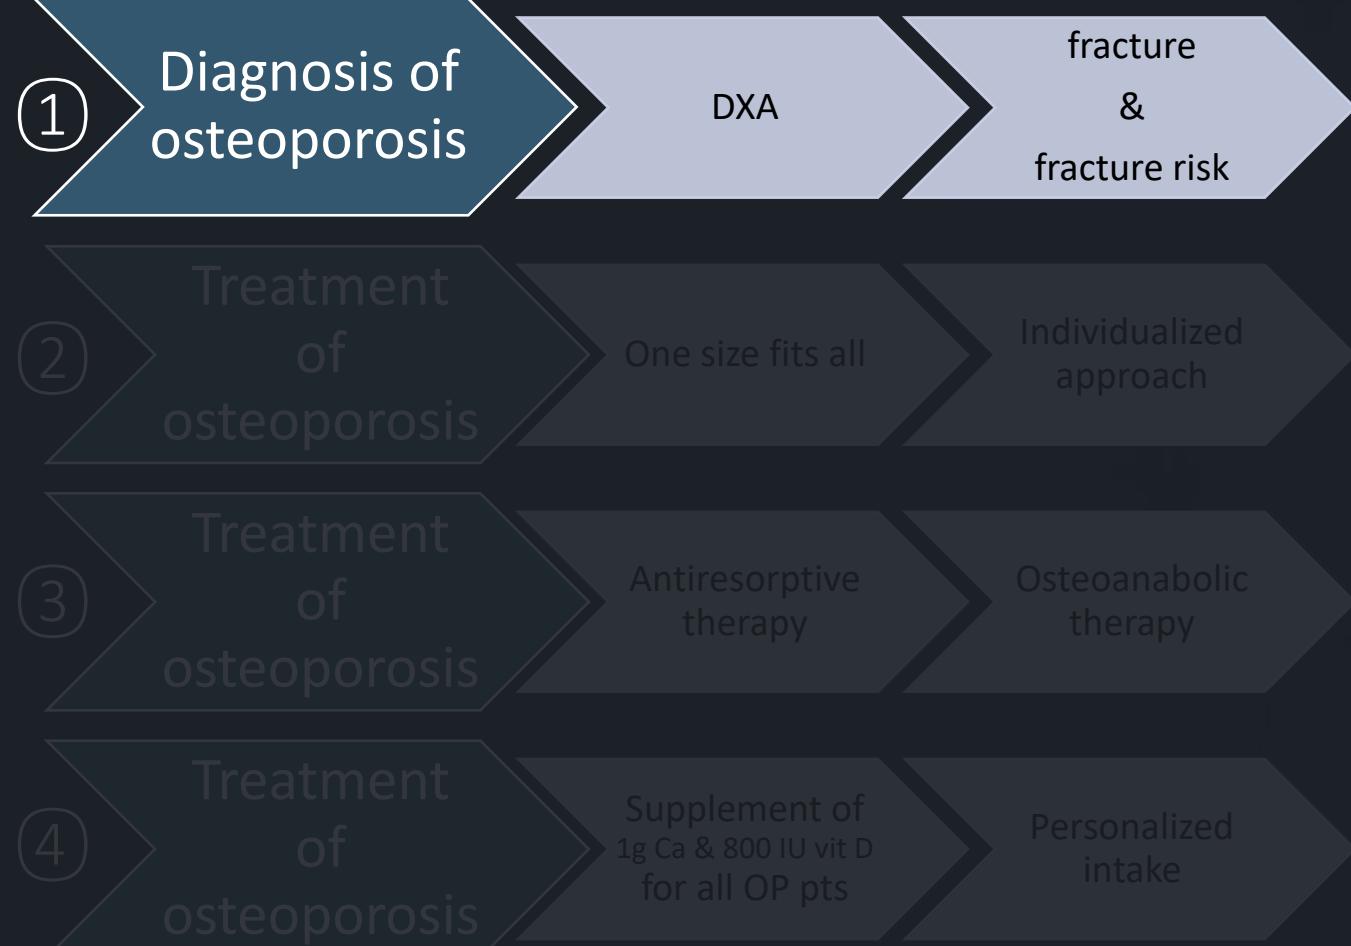

What is osteoporosis?

Update on osteoporosis

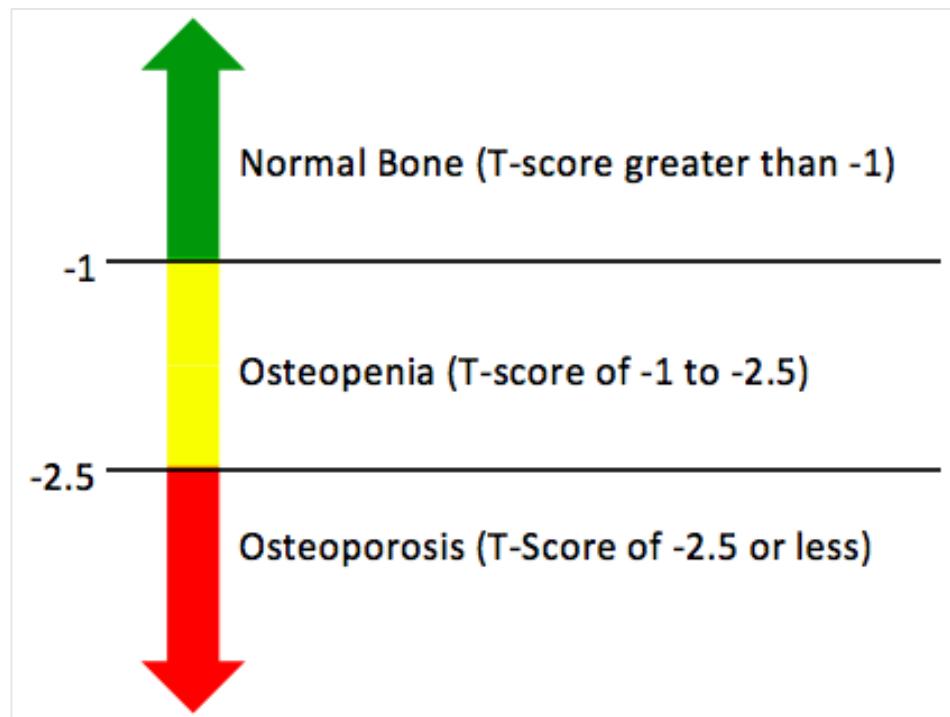

Update on osteoporosis

① Diagnosis of osteoporosis: from DXA to fracture or fracture risk

1. WHO BMD-based definition of osteoporosis

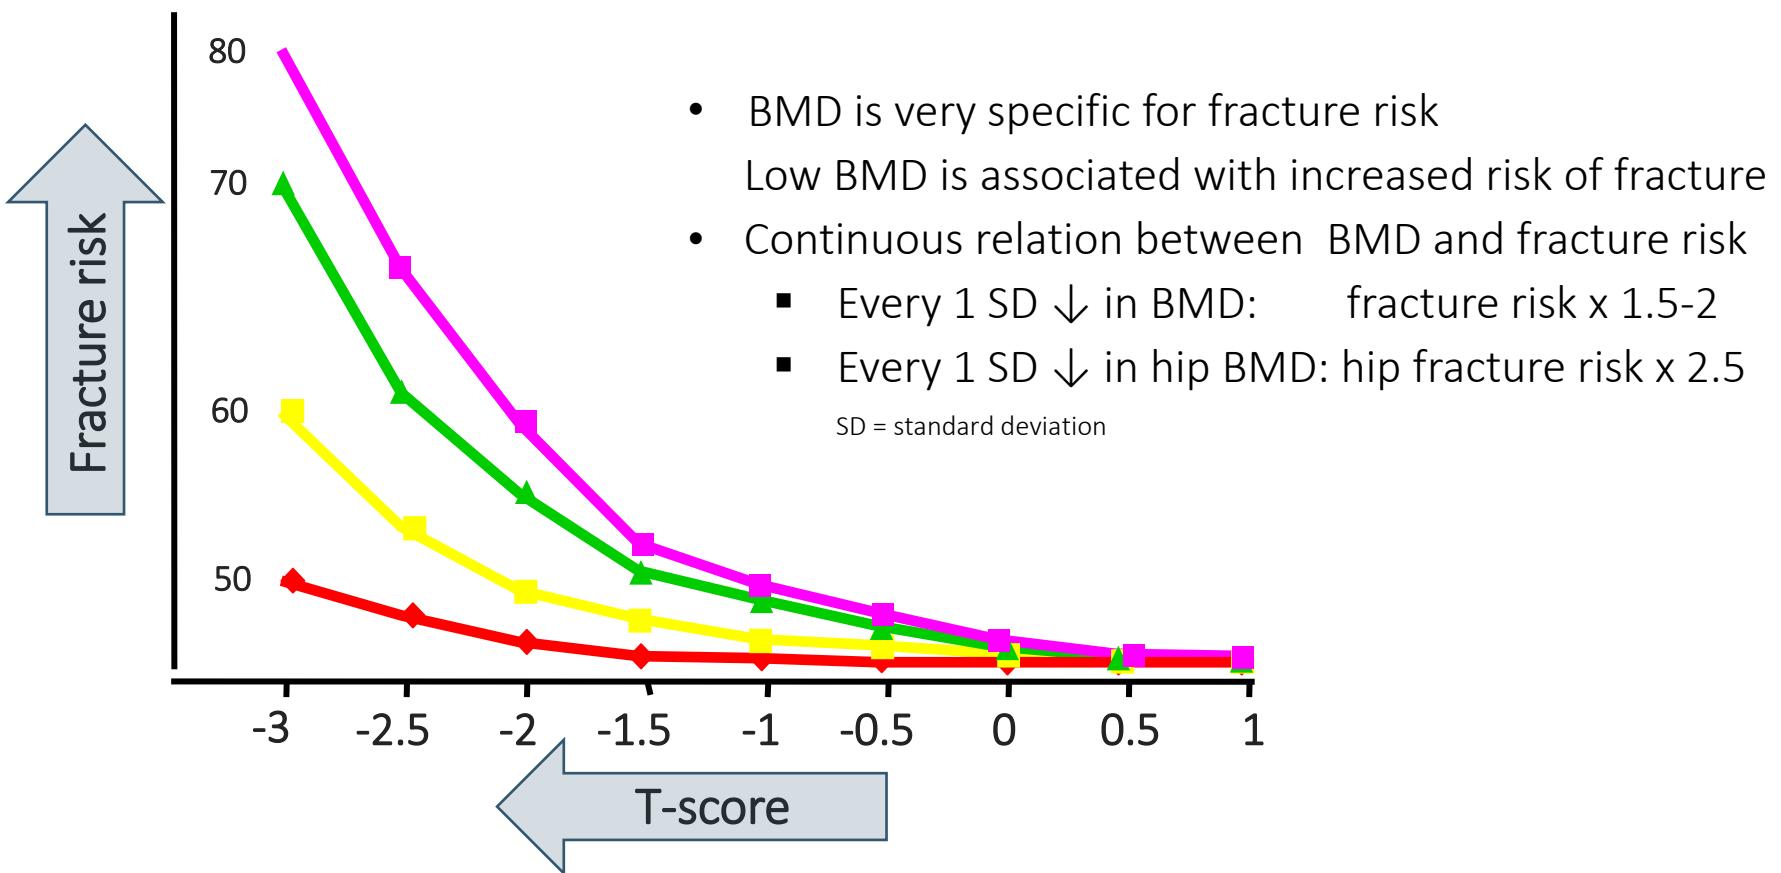

- T-score ≤ -2.5 at total hip, femoral neck or lumbar spine (L1-L4)
- Even without prior fragility fractures

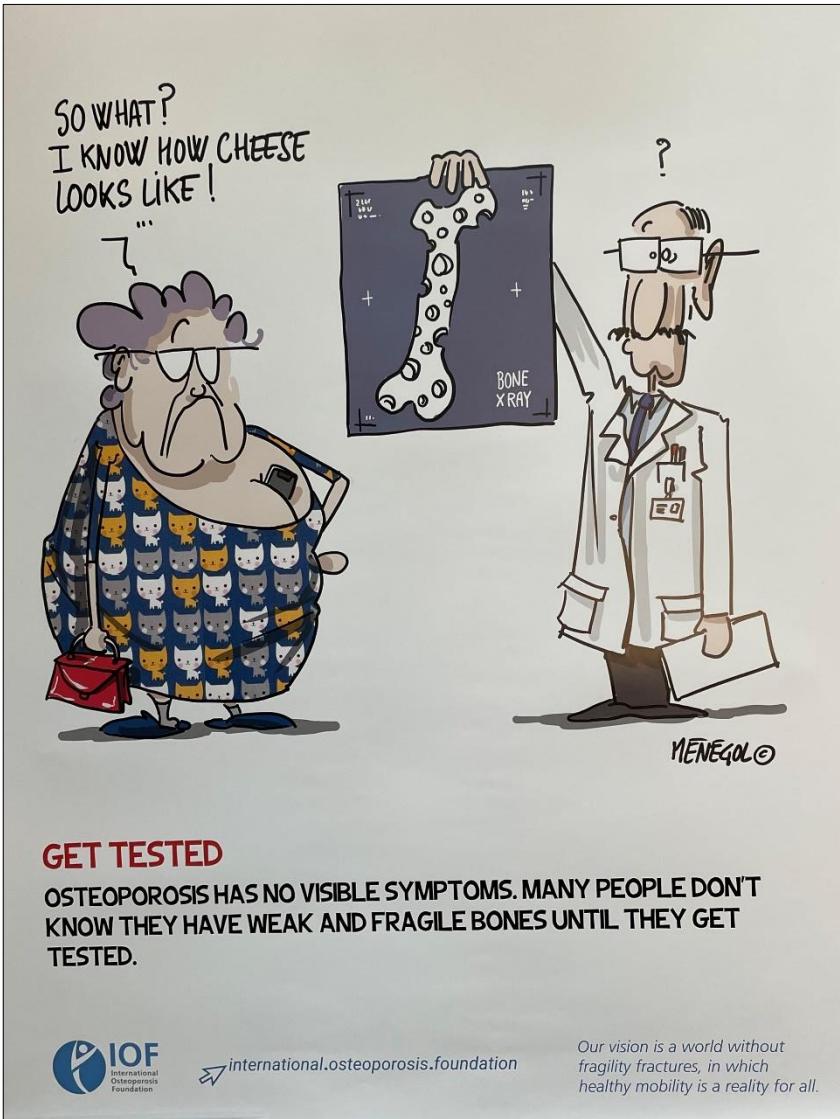

① Diagnosis of osteoporosis: from DXA to fracture or fracture risk

1. WHO BMD-based definition of osteoporosis

BMD strongly correlates with fracture risk

① Diagnosis of osteoporosis: from DXA to fracture or fracture risk

Maturitas 139 (2020) 69–89

The Belgian Bone Club 2020 guidelines for the management of osteoporosis in postmenopausal women

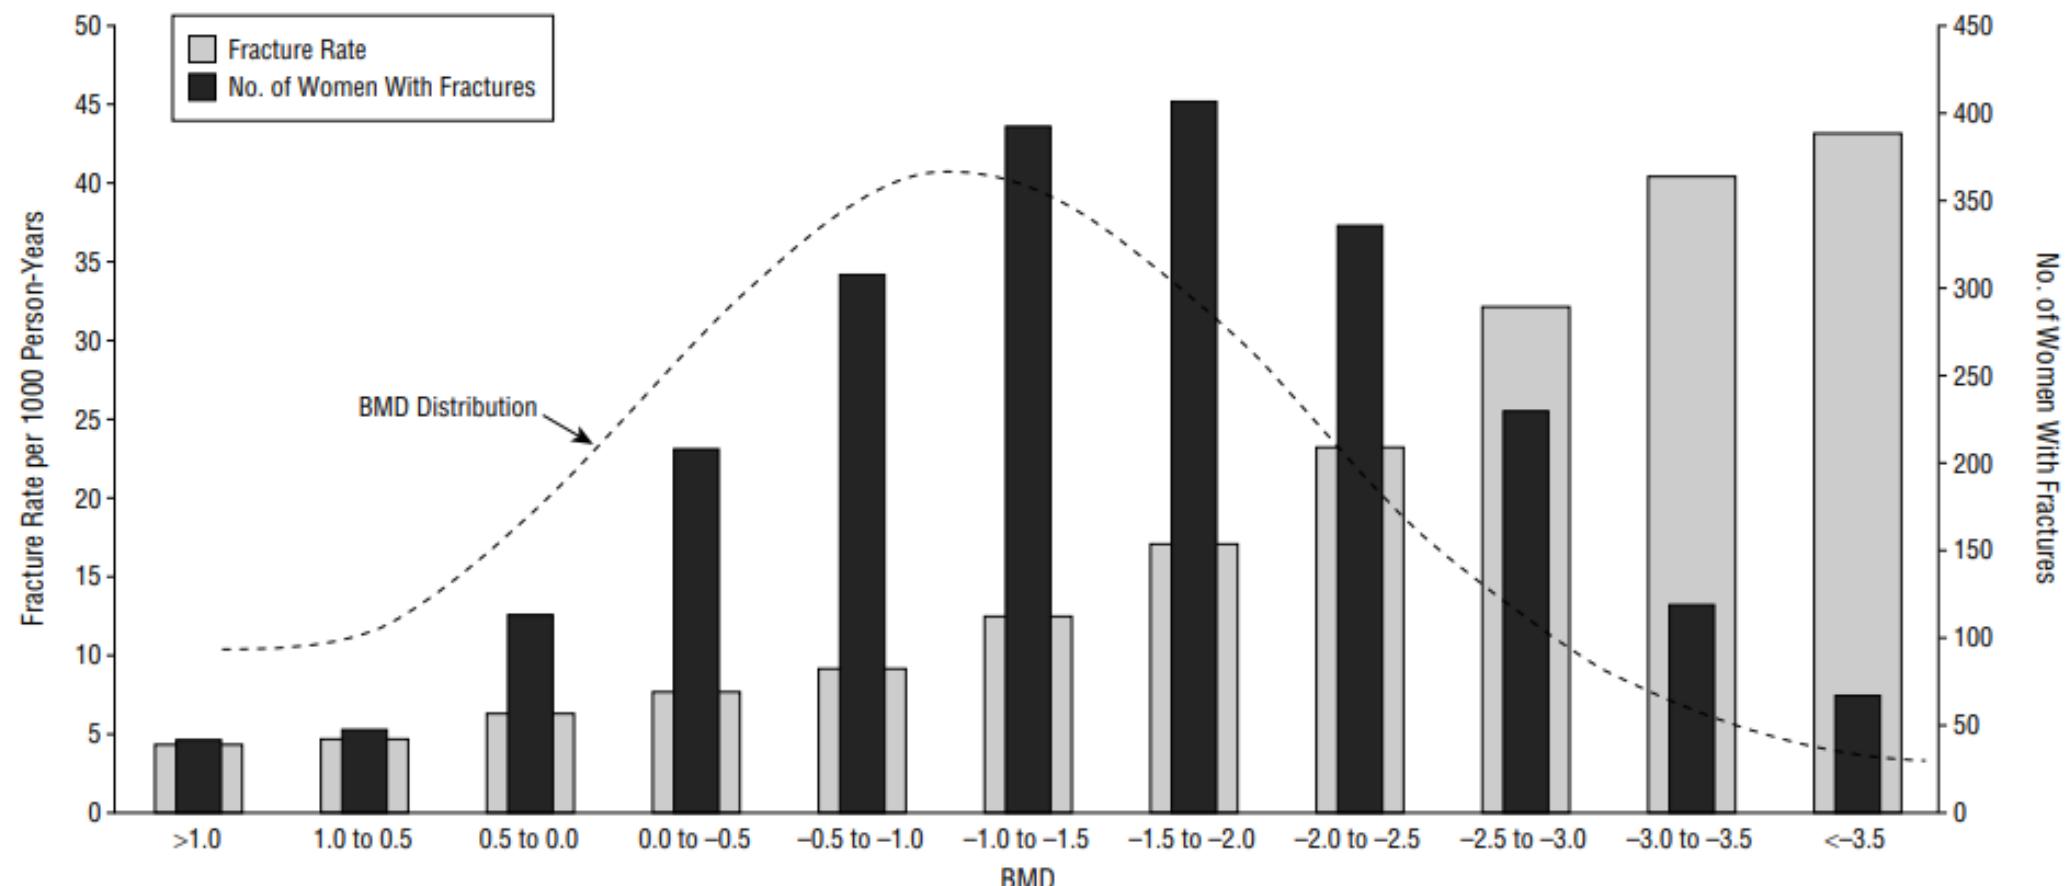

D. Sanchez-Rodriguez^{a,b,*}, P. Bergmann^c, J.J. Body^d, E. Cavalier^e, E. Gielen^f, S. Goemaere^g, B. Lapauw^g, MR Laurent^h, S. Rozenbergⁱ, G. Honvo^a, C. Beaudart^a, O. Bruyère^a

All women aged ≥ 65 years should undergo a formal fracture risk evaluation, including DXA

① Diagnosis of osteoporosis: from DXA to fracture or fracture risk

1. WHO BMD-based definition of osteoporosis

Majority of osteoporotic fractures occur in individuals with T-score > -2.5

① Diagnosis of osteoporosis: from DXA to fracture or fracture risk

1. WHO BMD-based definition of osteoporosis

Majority of osteoporotic fractures occur in individuals with T-score > -2.5

Fracture type	T-score at femoral neck	
	< -2.5	
<i>Vertebral fractures</i>	27 %	54% of hip fracture patients have hip T-score > -2.5
<i>Hip fractures</i>	46 %	
<i>Wrist fractures</i>	17 %	
<i>All non-vertebral fractures</i>	25%	

Rotterdam Study, 7806 ♀ & ♂ ≥ 55y
mean follow-up 6.8 years

① Diagnosis of osteoporosis: from DXA to fracture or fracture risk

1. WHO BMD-based definition of osteoporosis

- T-score ≤ -2.5 at TH, FN or LS

2. Previous low-energetic fracture

- In postmenopausal women or men > 50 years
- Other causes excluded (e.g. Kahler's disease)
- Even without T-score ≤ -2.5

① Diagnosis of osteoporosis: from DXA to fracture or fracture risk

1. WHO BMD-based definition of osteoporosis

- T-score ≤ -2.5 at TH, FN or LS

2. Previous low-energetic fracture

- In postmenopausal women or men > 50 years
- Other causes excluded (e.g. Kahler's disease)
- Even without T-score ≤ -2.5

3. Increased fracture risk based on clinical risk factors?

- e.g. FRAZ®

The screenshot shows the FRAX tool interface. At the top, it says "Country: Belgium" and "Name/ID: [empty field]". On the right, there is a link "About the risk factors". Below this is a "Questionnaire" section with 12 numbered questions. Questions 1-9 have input fields for age, sex, weight, height, and various medical history items. Questions 10-12 are radio button options. To the right of the questionnaire, there are dropdown menus for "Secondary osteoporosis" (No selected), "Alcohol 3 or more units/day" (No selected), and "Femoral neck BMD (g/cm²)". A "T-Score" field shows "-2.3". Below the questionnaire, a red box displays "BMI: 25.7" and "The ten year probability of fracture (%)" for "hip, spine, forearm, proximal humerus #". It lists two categories: "Major osteoporotic" (probability 23%) and "Hip Fracture" (probability 9.6%). At the bottom, there is a note "If you have a TBS value, click here: Adjust with TBS".

ADDITIONAL NOTES ON RISK FACTORS	
Age	The model accepts ages between 40 and 90 years. If ages below or above are entered, the program will compute probabilities at 40 and 90 year, respectively.
Previous fracture	A previous fracture denotes more accurately a previous fracture in adult life occurring spontaneously, or a fracture arising from trauma which, in a healthy individual, would not have resulted in a fracture.
Glucocorticoids	Enter yes if the patient is currently exposed to oral glucocorticoids or has been exposed to oral glucocorticoids for more than 3 months at a dose of prednisolone of 5 mg daily or more (or equivalent doses)
Secondary osteoporosis	Enter yes if the patient has a disorder strongly associated with osteoporosis. These include type I (insulin dependent) diabetes, osteogenesis imperfecta in adults, untreated long-standing hyperthyroidism, hypogonadism or premature menopause (<45 years), chronic malnutrition, or malabsorption and chronic liver disease

Update on osteoporosis

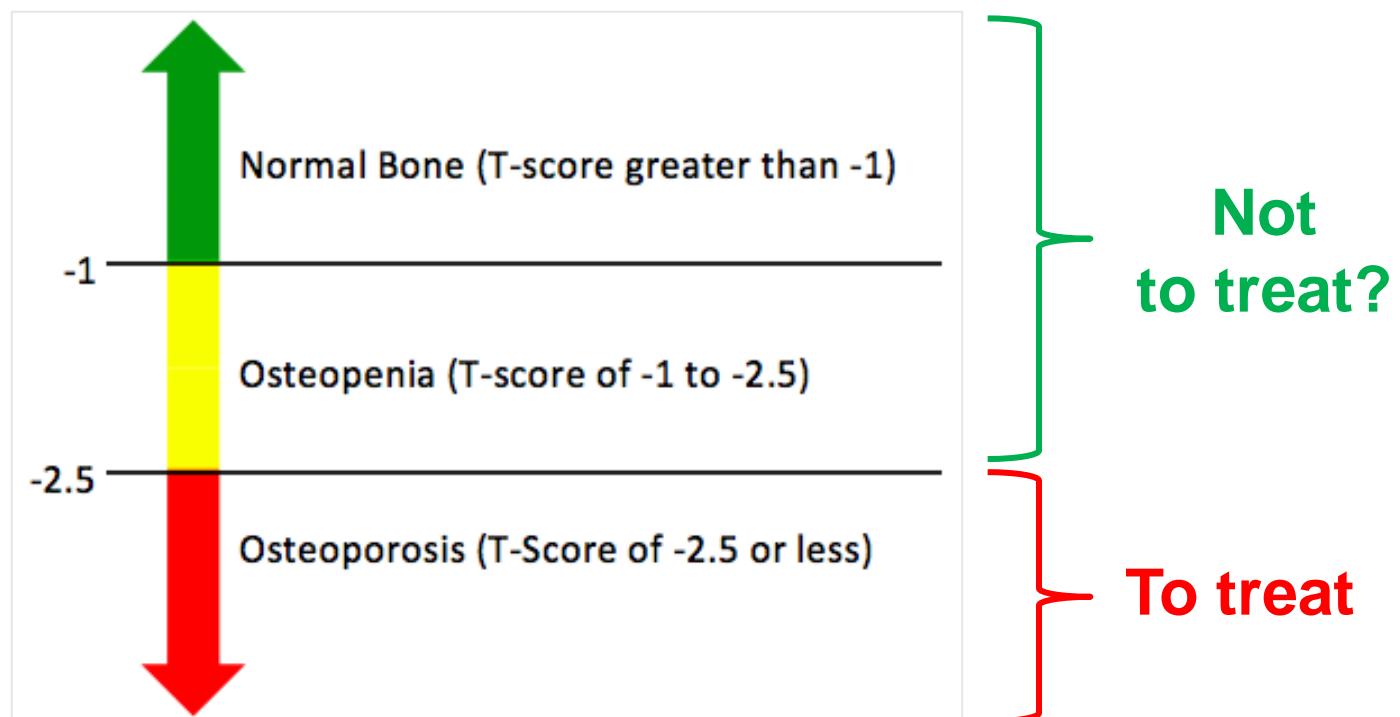

② Treatment of osteoporosis: from “one size fits all” to individualized approach

1. WHO BMD-based definition of osteoporosis

- T-score ≤ -2.5 at TH, FN or LS
- Even without fractures

➔ Primary fracture prevention

Majority of osteoporotic fractures occur in individuals with T-score > -2.5

Fracture type	T-score at femoral neck < -2.5
Vertebral fractures	27 %
Hip fractures	46 %
Wrist fractures	17 %
All non-vertebral fractures	25%

Rotterdam Study, 7806 ♀ & ♂ ≥ 55 years
mean follow-up 6.8 years

54% of hip fracture patients have hip T-score > -2.5

② Treatment of osteoporosis: from “one size fits all” to individualized approach

1. WHO BMD-based definition of osteoporosis

- T-score ≤ -2.5 at TH, FN or LS
- ➔ Primary fracture prevention

2. Previous low-energetic fracture

- In postmenopausal women or men > 50 years
- Other causes excluded (e.g. Kahler's disease)
- Even without T-score ≤ -2.5
- ➔ Secondary fracture prevention

3. Increased fracture risk based on clinical risk factors

- e.g. FRAX®

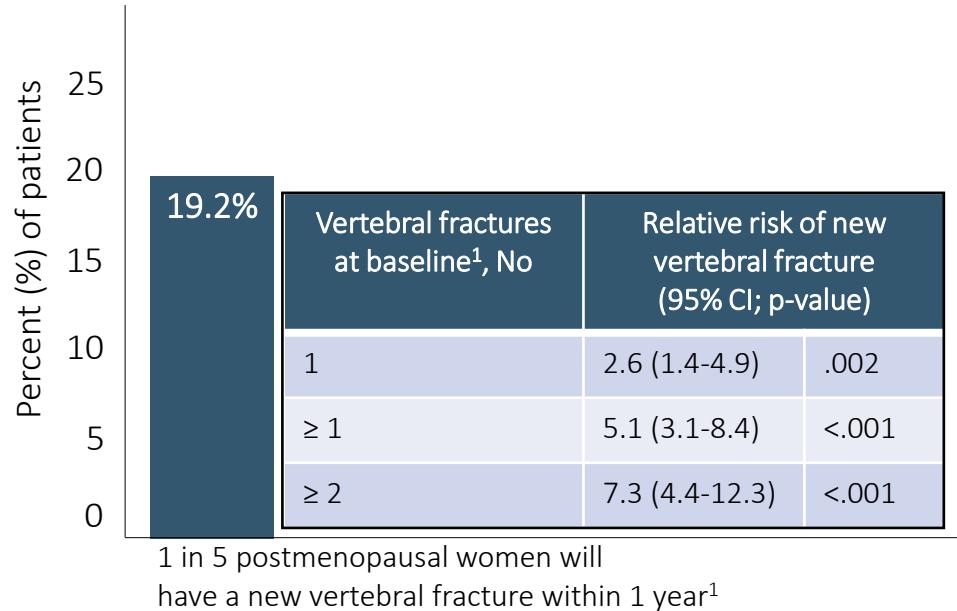

High fracture risk by FRAX® according to BBC:

- 10-year FRAX® probability of fracture
- $\geq 20\%$ for MOF
 - $\geq 3\%$ for hip fracture (age < 70 years)
 - $\geq 5\%$ for hip fracture (age ≥ 70 years)

❖ Previous fragility fracture as threshold for intervention

Vertebral (spinal) fractures

Women who develop a vertebral fracture
are at substantial risk for additional fracture

¹Lindsay. JAMA 2001; 285: 320-23; ²Lindsay. Osteoporos Int 2005; 16: 78-85; ³Black. JBMR 1999; 14: 821-828

❖ Previous fragility fracture as threshold for intervention

Hip fracture

	Hip fracture admissions, by sex	
	Men, n (%)	Women, n (%)
Number	97	251
Any prior fracture	29 (30%)	113 (45%)
Prior hip fracture	8 (8%)	47 (19%)

All hip fracture admissions in 2 hospitals (Sydney, AU) were identified retrospectively from medical records over 12 months

Koningin Paola met succes geopereerd

Koningin Paola is vrijdagochtend geopereerd, nadat ze bij een val haar heup had gebroken. De operatie is zeer goed verlopen, zo werd vernomen bij het paleis.

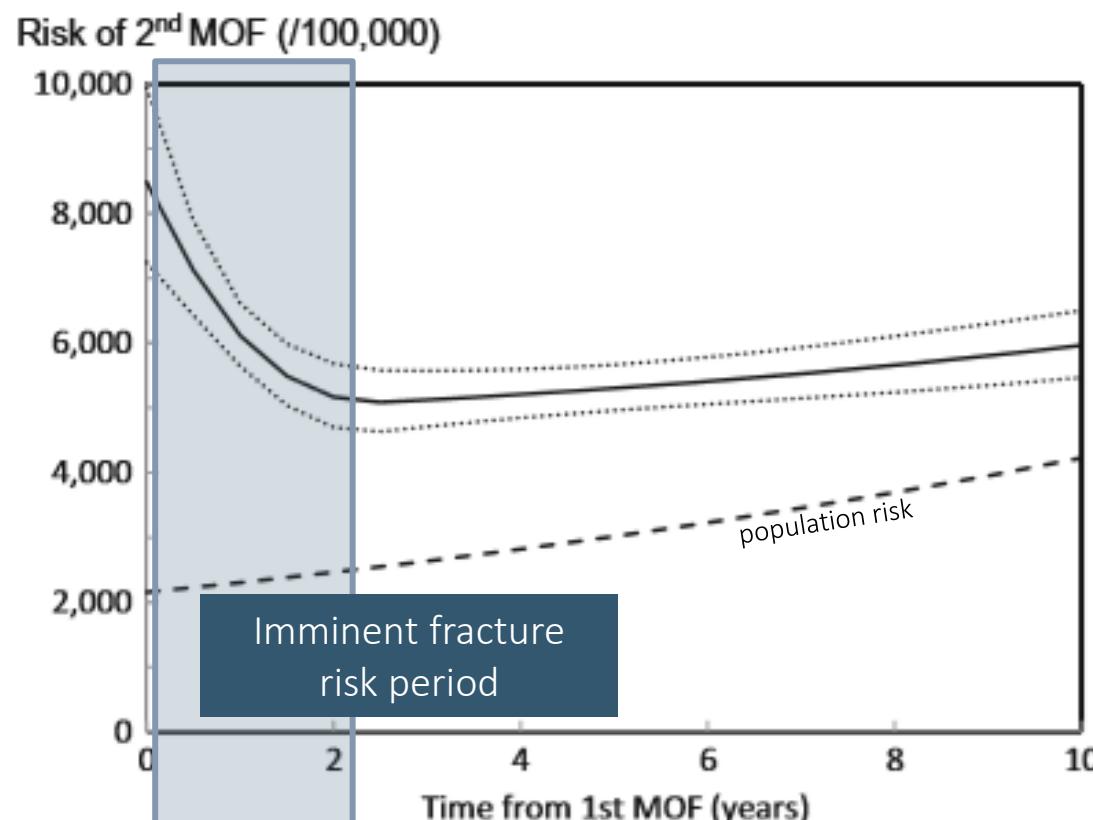

De 79-jarige Paola kwam ten val in haar woning, het kasteel Belvédère dat zich recht tegenover het koninklijk paleis van Laken bevindt. De koningin werd meteen afgevoerd naar het ziekenhuis Saint-Luc in Brussel, waar ze vrijdag werd geopereerd.

Paola lag rond de jaarwisseling al een week in het Brusselse ziekenhuis, nadat ze bij een val een wervelfractuur had opgelopen. Die breuk had geen neurologische complicaties.

❖ Previous fragility fracture as threshold for intervention

Imminent fracture risk

- Population based cohort N=18,872 ♀ & ♂
- Followed for 510,265 person years
 - N=5039: ≥ 1 MOF
 - N=1919: second MOF

Time dependency of re-fracture after index fracture

Dashed line is risk of first MOF in whole population for a ♀ 75 years at baseline

② Treatment of osteoporosis: from “one size fits all” to individualized approach

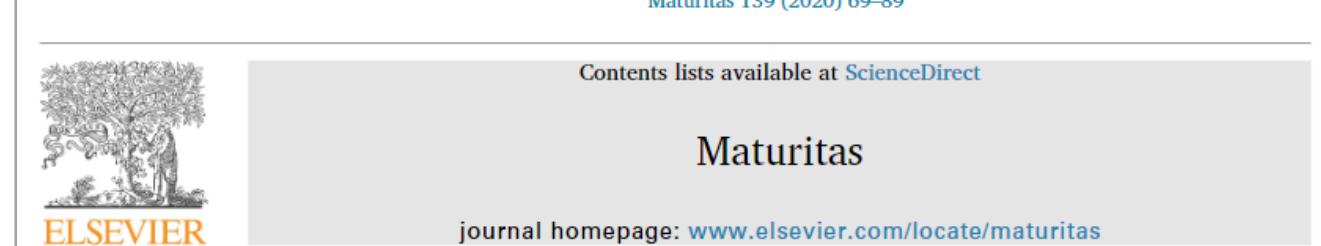

1. WHO BMD-based definition of osteoporosis

- T-score ≤ -2.5 at TH, FN or LS
- Primary fracture prevention

2. Previous low-energetic fracture

- In postmenopausal women or men > 50 years
 - Other causes excluded (e.g. Kahler's disease)
 - Even without T-score ≤ -2.5
- Secondary fracture prevention

3. Increased fracture risk based on clinical risk factors

- e.g. FRAX®

The Belgian Bone Club 2020 guidelines for the management of osteoporosis in postmenopausal women

10-year FRAX® probability of fracture

- ≥ 20 % for MOF
- ≥ 3 % for hip fracture (age < 70 years)
- ≥ 5 % for hip fracture (age ≥ 70 years)

② Treatment of osteoporosis: from “one size fits all” to individualized approach

1. WHO BMD-based definition of osteoporosis

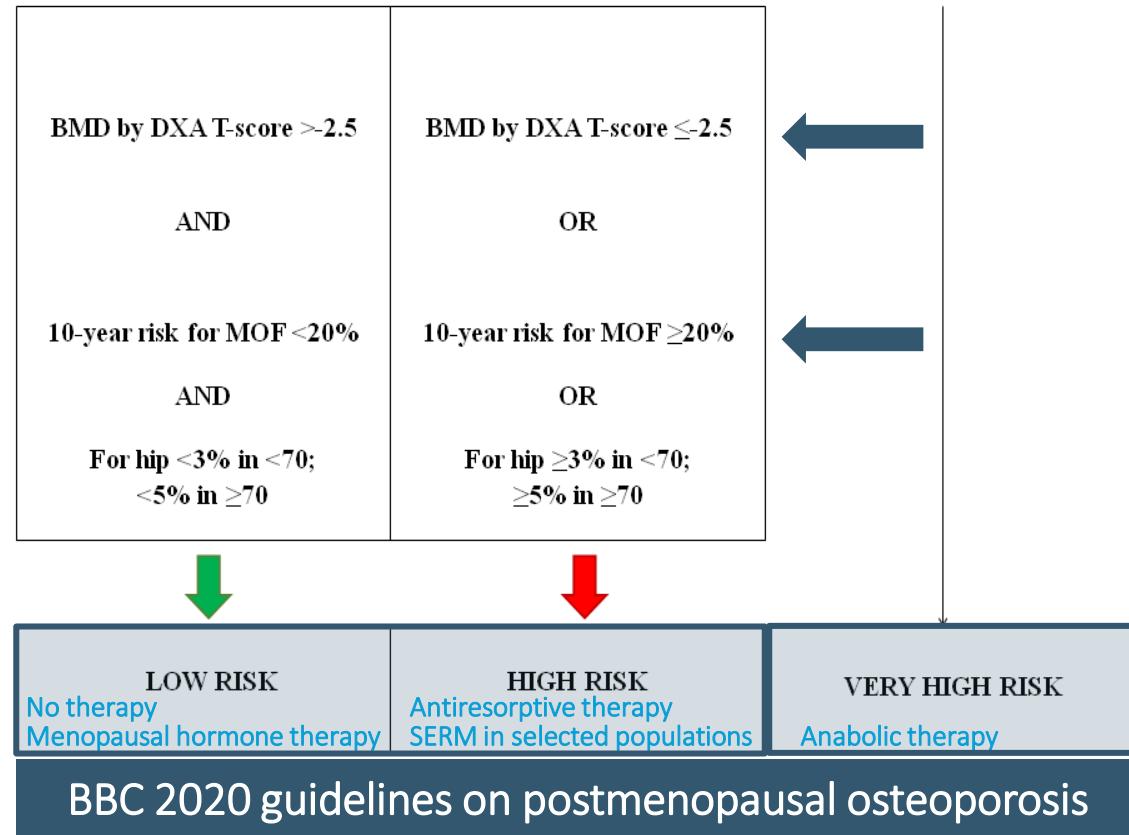

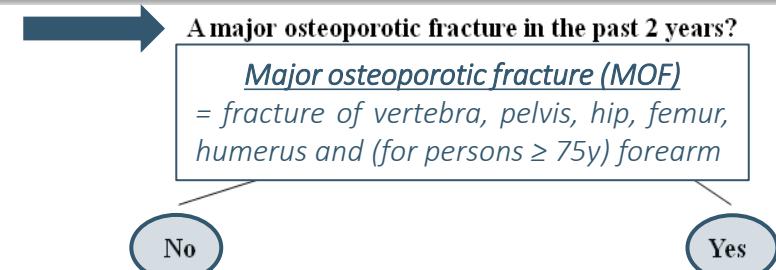

- T-score ≤ -2.5 at TH, FN or LS
- ➔ Primary fracture prevention

2. Previous low-energetic fracture

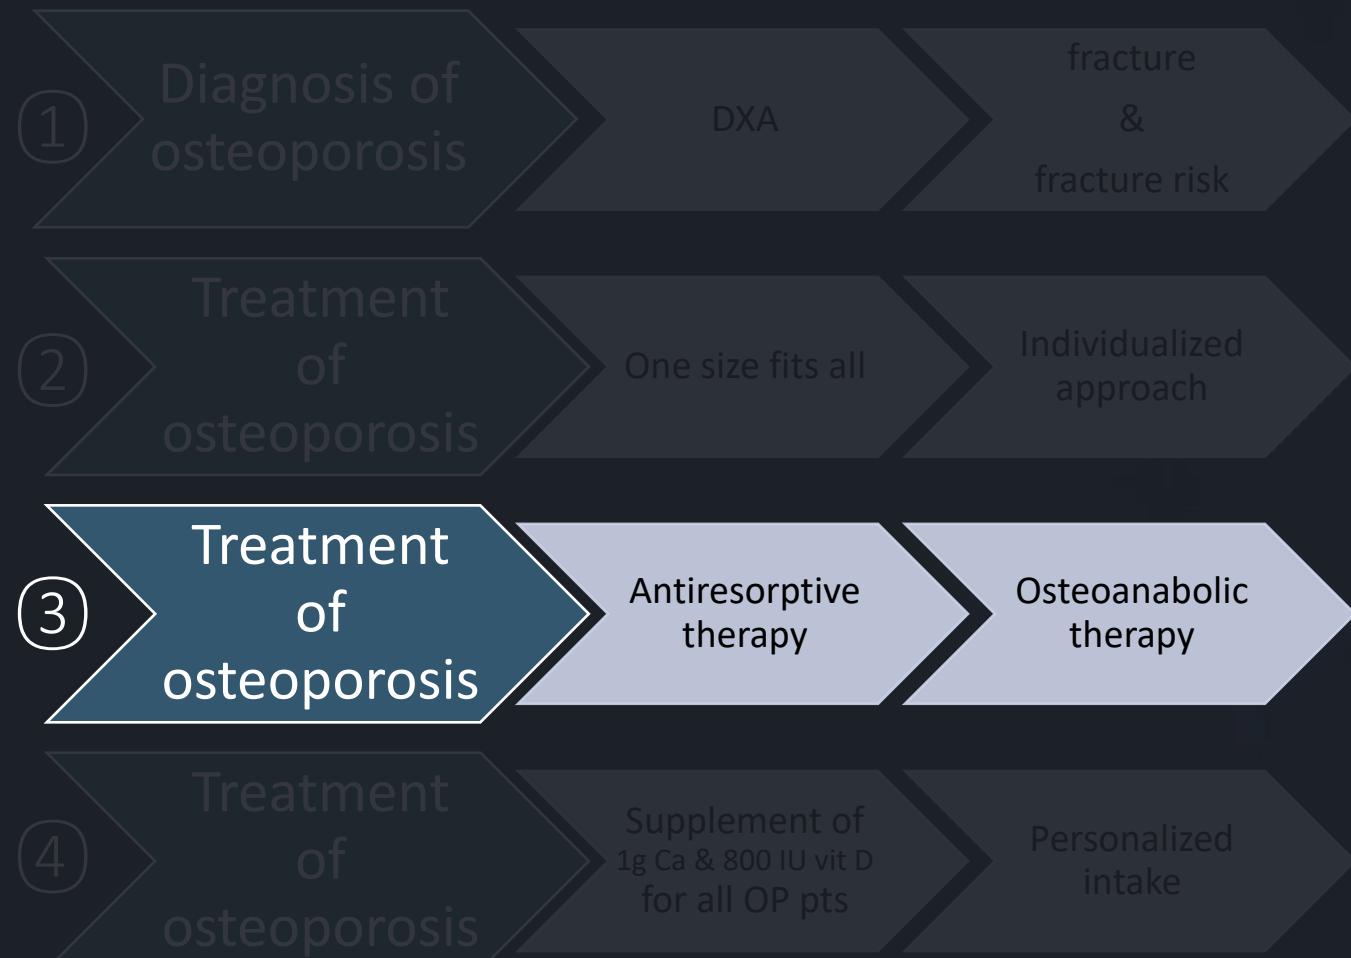

- In postmenopausal women or men > 50 years
- Other causes excluded (e.g. Kahler's disease)
- Even without T-score ≤ -2.5
- ➔ Secondary fracture prevention

3. Increased fracture risk based on clinical risk factors

- e.g. FRAX®

Update on osteoporosis

③ Treatment of osteoporosis: from antiresorptive therapy to anabolic therapy

Overview of drugs for osteoporosis*

- Antiresorptive medication

- Selective-estrogen receptor modulator
- Bisphosphonates (e.g. Fosamax®, Aclasta®)
- Denosumab (Prolia®)

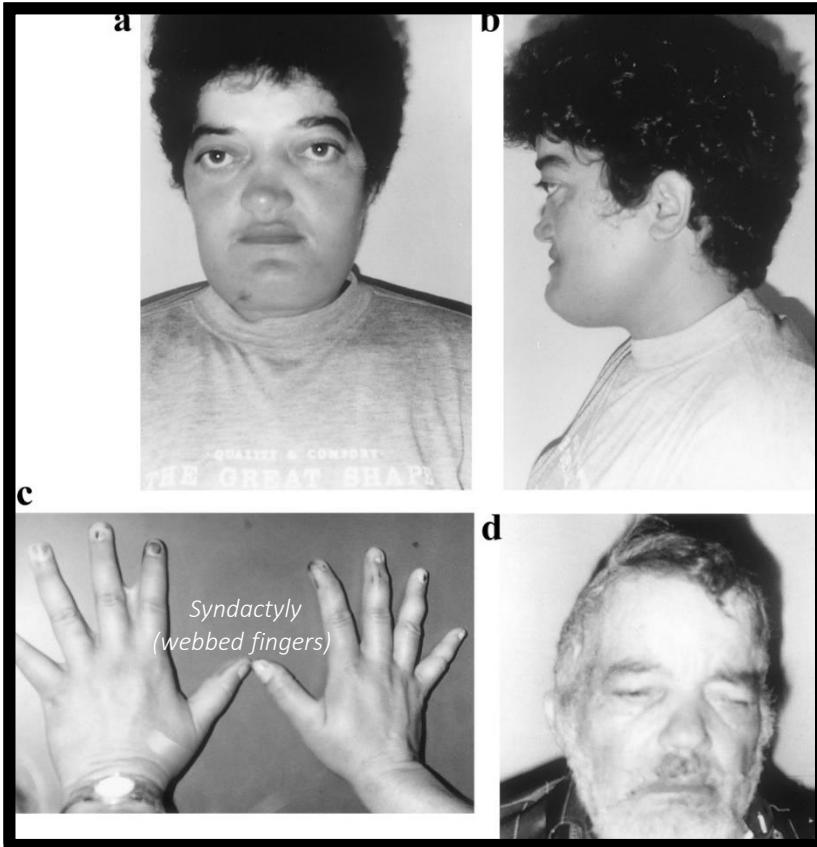

- Anabolic medication

- Teriparatide (Forsteo®)
- Romosozumab (Evenity®)

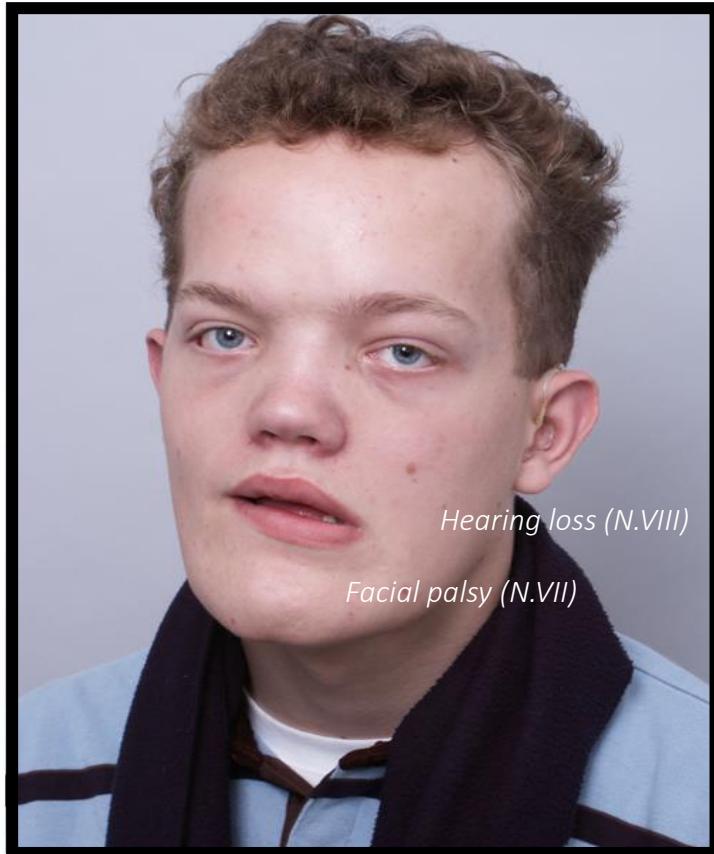

available in Belgium as of December 1st, 2021

Sclerosteosis (Truswell-Hansen disease)

- First described in 1958
- Autosomal recessive disorder
- Most prominent in Afrikaner population in South Africa
- Progressive bone overgrowth, most pronounced in the skull and mandible
- Increased intracranial pressure and entrapment of cranial nerves (eg. N. II, VII, VIII)
- Variable syndactyly, usually digit II and III
- Fractures have never been reported

van Buchem disease (Hyperostosis Corticalis Familiaris Generalisata)

- Autosomal recessive disorder
- Described by prof. van Buchem in 1955
- Clinical features similar to sclerosteosis, but generally milder & no syndactyly
- Patients almost never fracture (very rarely after high-energetic trauma)
- Mainly in Urk (Flevoland, NL)

Progressive bone overgrowth due to mutation in SOST gene

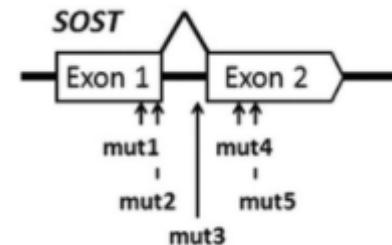

Mandibula in van Buchem disease

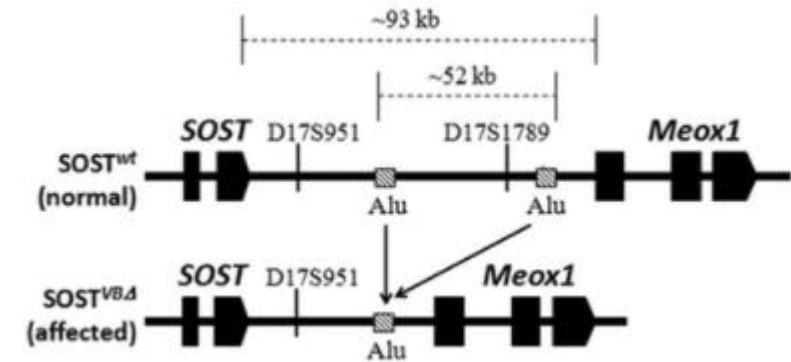

Normal mandibula

Sclerosteosis

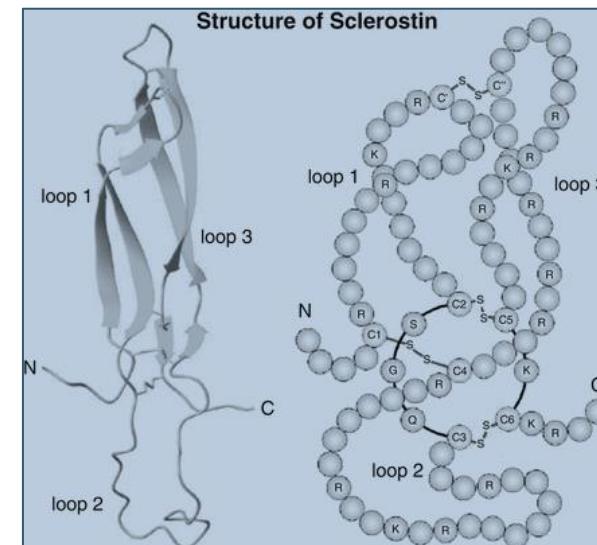

loss of function mutations in SOST gene
→ no sclerostin is synthesized

Van Buchem disease

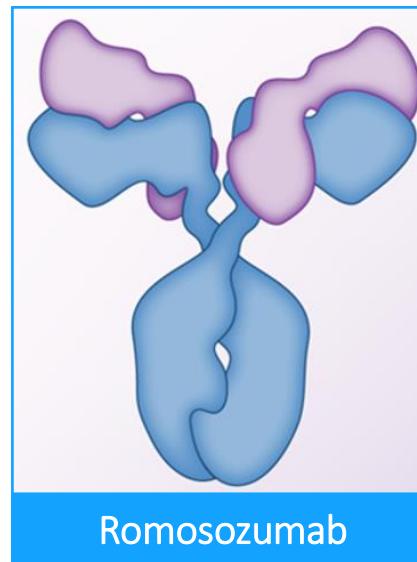

52 kb deletion downstream of SOST gene
→ reduced sclerostin production

Romosozumab (Evenity®)

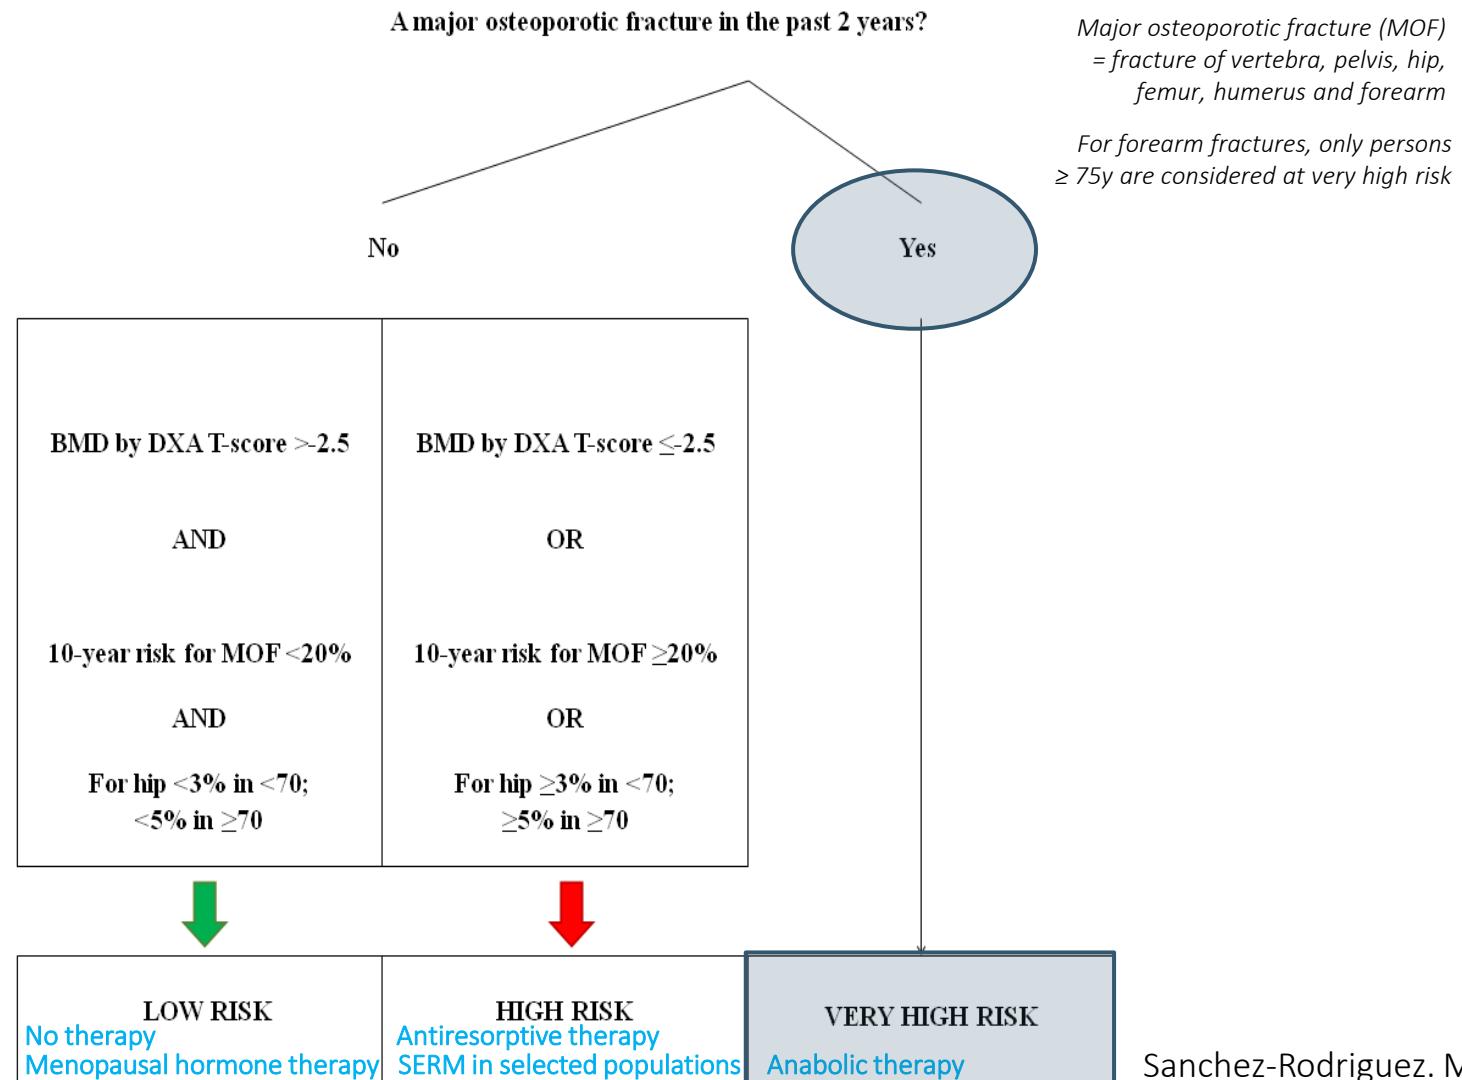

- Monoclonal antibody that **uncouples bone formation and resorption**
- **Quickly and strongly** increases BMD and decreases the risk of subsequent fractures
- **Superior** to Alendronate in treatment-naive (ARCH) and Teriparatide in pre-treated (STRUCTURE) patients
- Effective and similar safety profile in postmenopausal women with **mild-to-moderate chronic kidney disease**
- Is **contraindicated** in patients with history of stroke or myocardial infarction

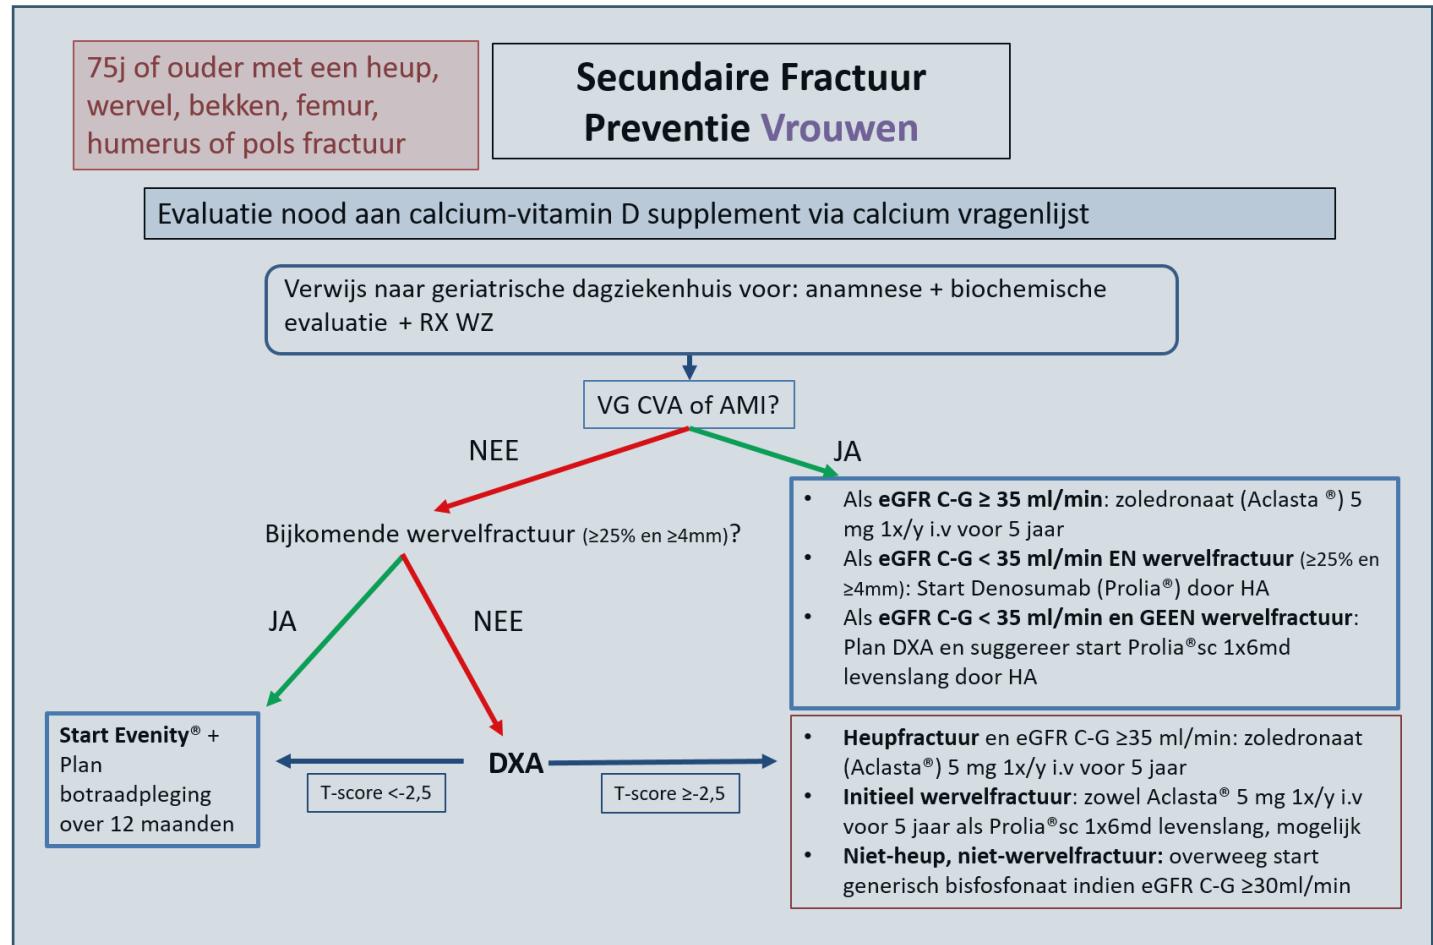

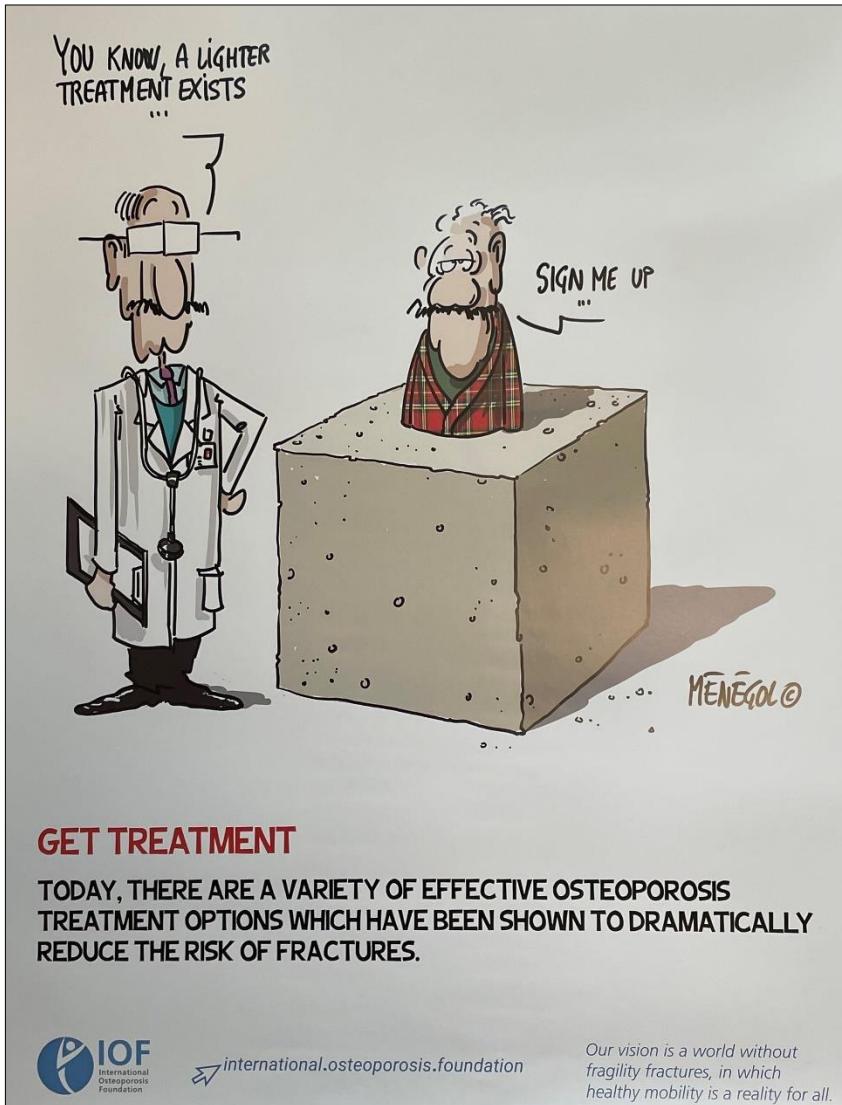

- Is available for patients with **recent major osteoporotic fractures** defined by the 2020 BBC guidelines
- Is reimbursed in **treatment-naive patients** or patients on **prior antiresorptive therapy**

Belgian Bone Club 2020 guidelines for the management of osteoporosis in postmenopausal women

Identification of persons at low, high and very high fracture risk

③ Treatment of osteoporosis: from antiresorptive therapy to anabolic therapy

③ Treatment of osteoporosis: from antiresorptive therapy to anabolic therapy

Beste Herman en Evelien,

Vanuit (koud) Lissabon even meegeven dat ik met het Amgen-team heb samengezet. Alle inspanningen van jullie kant heb ik nog eens internationaal kunnen toelichten, en men is daar ook heel dankbaar voor.

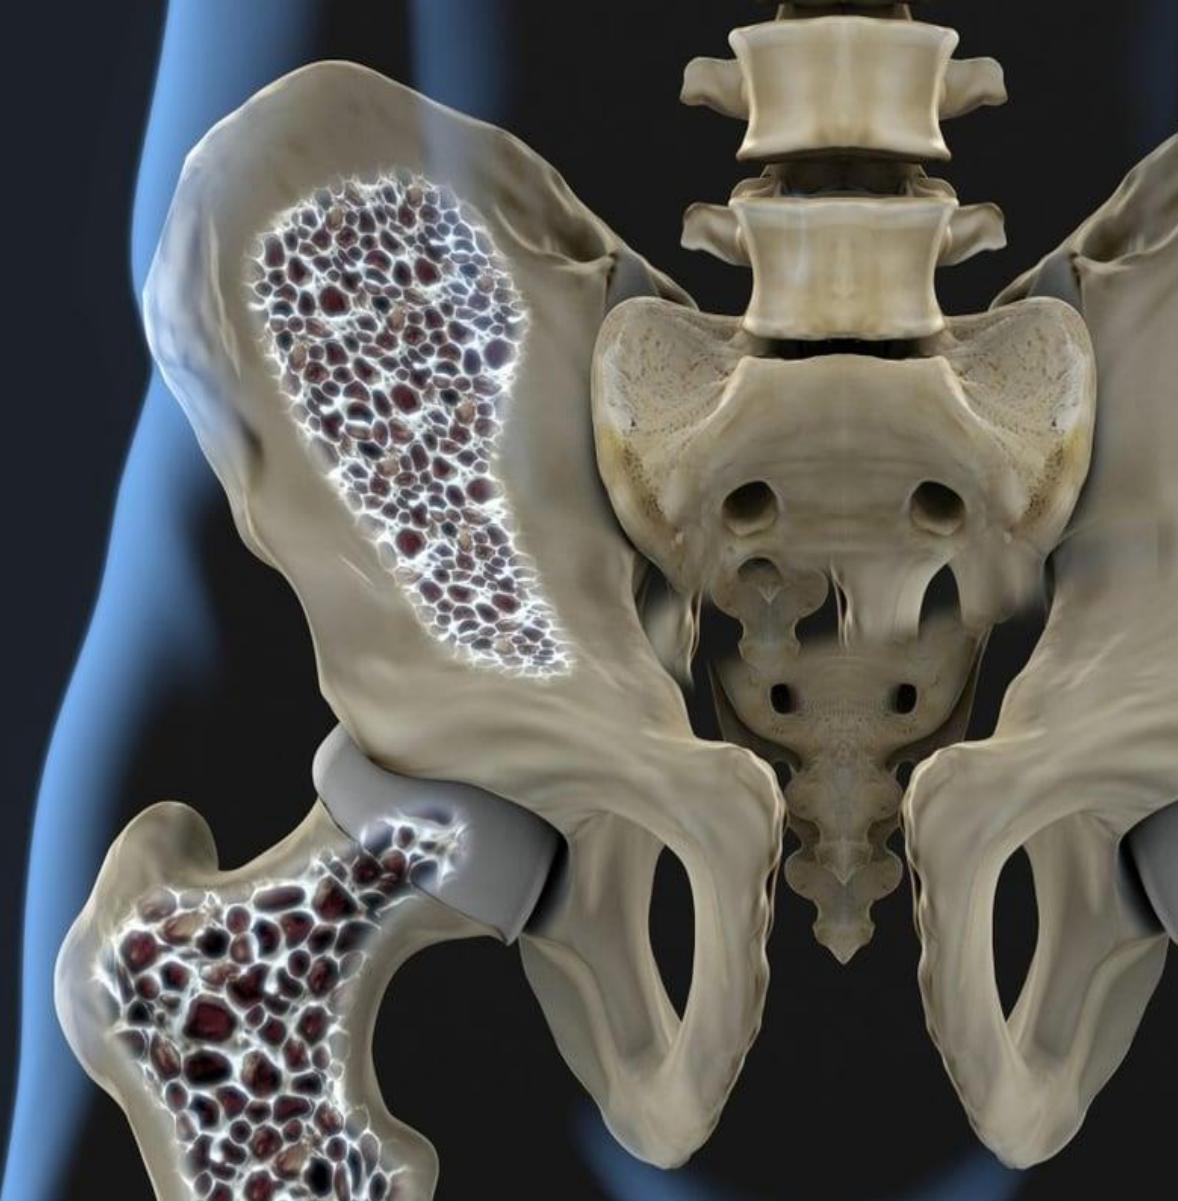

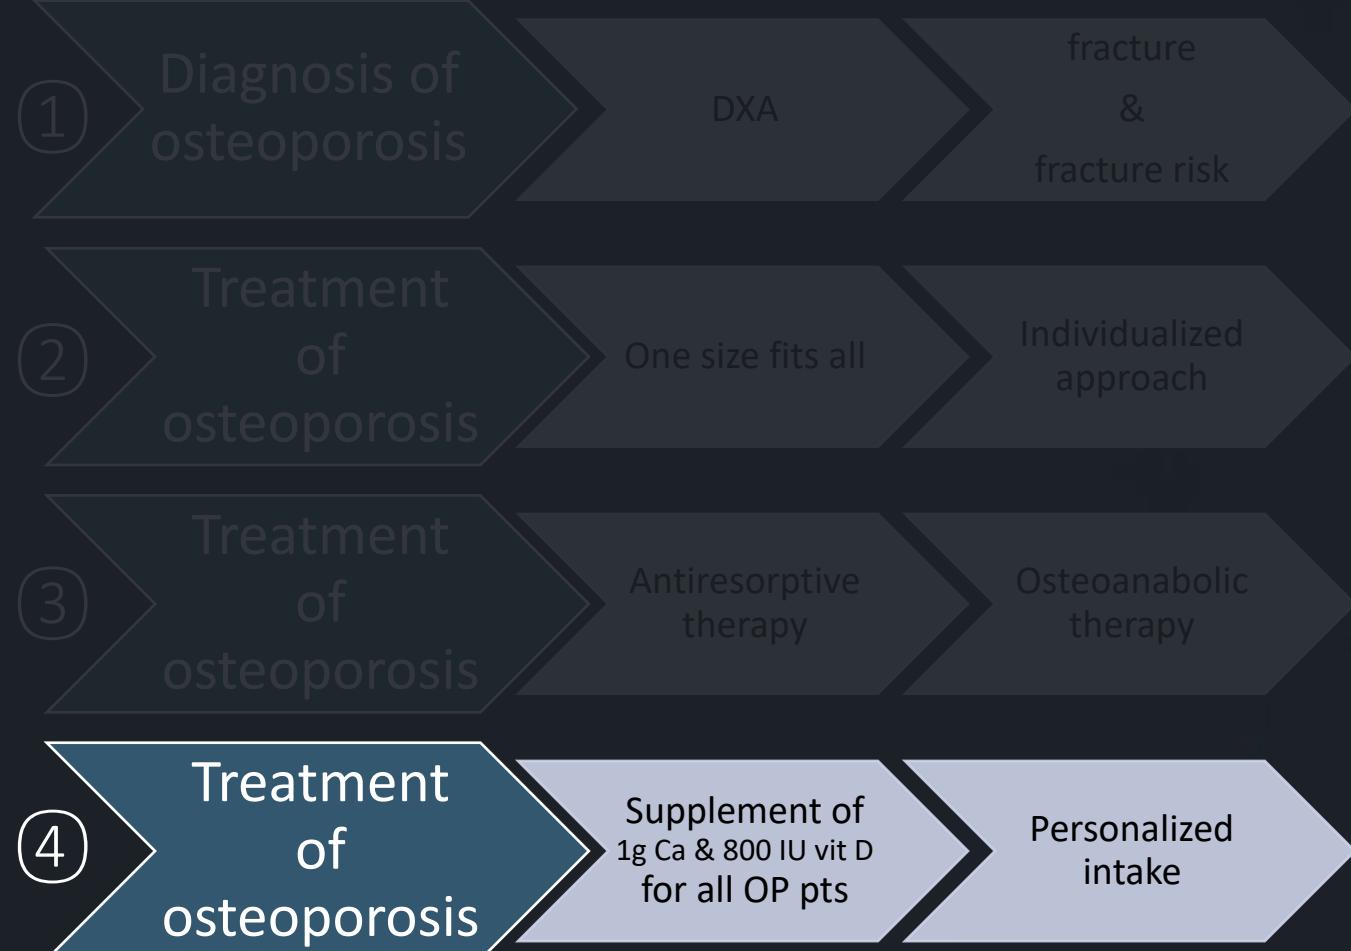

Ik ben deze week nog alleen woensdagvoormiddag tussen 9:00 en 11:00 beschikbaar. Zou dan even met jullie beiden willen samenzitten, om een nieuw initiatief te bespreken die onze recruteringsFRAME moet vooruit helpen.

Graag dus 30 minuten uitrekken voor gezamelijk overleg nu woensdag, ik stel voor om 9:00. Is erg belangrijk. Wil bijgevoegde documenten driemaal uitprinten en meebrengen.

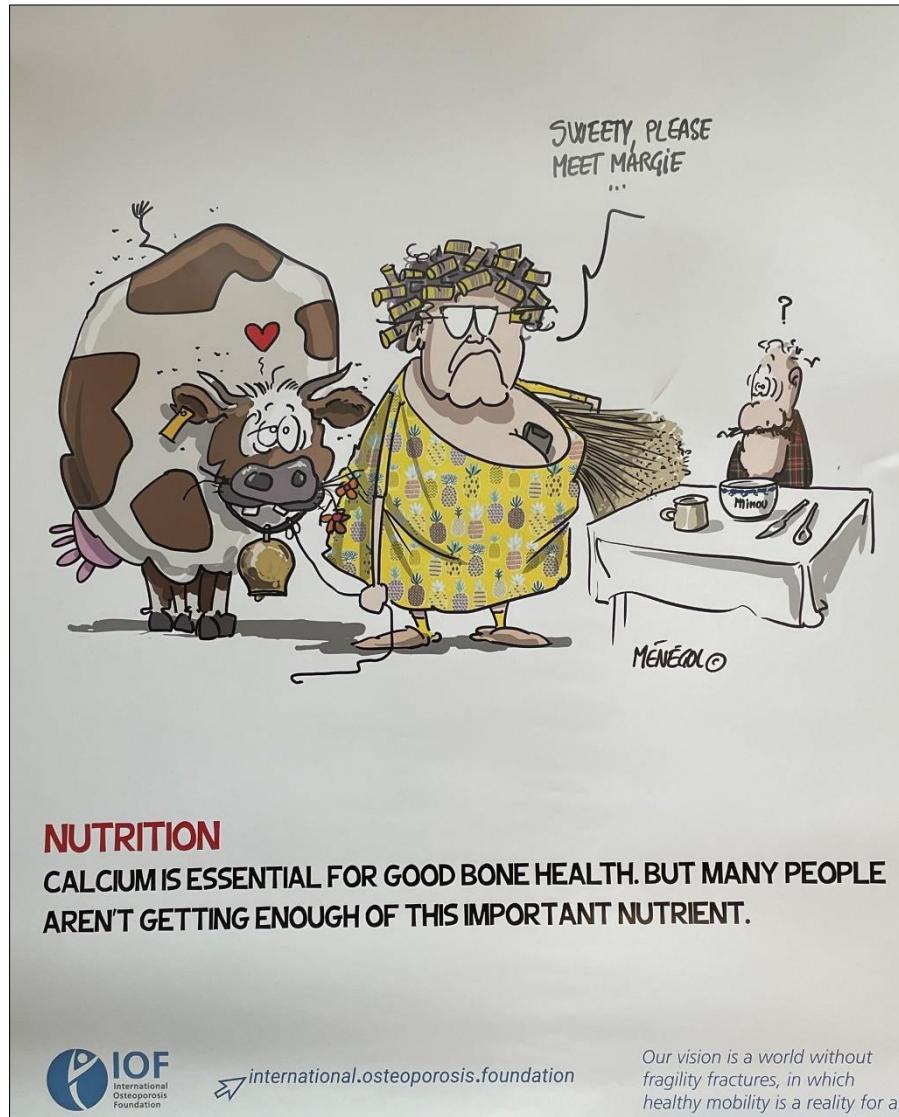

Bedankt,

Steven

Update on osteoporosis

④ Treatment of osteoporosis: from 1g calcium & 800 IU vit D supplements for all patients with OP ...

④ Treatment of osteoporosis:

from 1g calcium & 800 IU vit D supplements for all patients with OP ...

Recommended dietary allowance for calcium & vitamin D

Calcium		
	Recommended dietary allowance (mg/day)	Upper level intake (mg/day)
1-3 years	700	2500
4-8 years	1000	2500
9-13 years	1300	3000
14-18 years	1300	3000
19-30 years	1000	2500
31-50 years	1000	2500
51-70 years ♂	1000	2000
51-70 years ♀	1200	2000
> 70 years	1200	2000

Vitamin D		
	Recommended dietary allowance (IU/day)	Upper level intake (IU/day)
1-3 years	600	2500
4-8 years	600	3000
9-13 years	600	4000
14-18 years	600	4000
19-30 years	600	4000
31-50 years	600	4000
51-70 years ♂	600	4000
51-70 years ♀	600	4000
> 70 years	800 <i>needed to achieve 'optimal' serum 25OHD level</i>	4000

④ Treatment of osteoporosis: from 1g calcium & 800 IU vit D supplements for all patients with OP ...

Daily dietary calcium intake in men and women
aged ≥ 65 years in Belgium

	Men	Women
P10	324 mg	287 mg
P50	748 mg	676 mg
P90	1166 mg	1101 mg

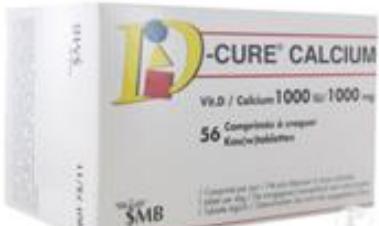

Behandeling

- combineren
- doseren
- volhouden

Dus vandaar volhouden, combineren en correct doseren.

④ Treatment of osteoporosis: from 1g calcium & 800 IU vit D supplements for all patients with OP to personalized intake

Wat is uw **gemiddelde** inname van ...?
(graag ingevuld meebrengen op uw volgende raadpleging metabole botziekten)

1) Melk, een glas of tas? (150 ml)

Zowel volle, halfvolle of magere melk; ook karnemelk, chocomelk, calciumverrijkte sojadrink, enz.

..... keer per (=> per dag of per week)

2) Yoghurt, pudding of platte kaas, een potje? (125 g)

Zowel volle, halfvolle of magere natuur- of fruityoghurt; ook chocolade of vanillepudding, enz.

..... keer per (=> per dag of per week)

3) Kaas of kaasgerecht, een snede of portie? (30 g)

Ook b.v. een quiche, lasagne of pizza met kaas, ...

..... keer per (=> per dag of per week)

4) Fles- of kraantjeswater: glazen per dag (200ml)

Contrex/Hépar water: glazen per dag

5) Appelsienen: stuks per dag

6) Kan u heel weinig eten? (bv. door een ernstige ziekte) **NEE / JA**

7) Eet u (bijna) dagelijks groenten, fruit én bruin/grijs brood? **NEE / JA**

8) Gebruikt u andere calciumrijke voeding, bijvoeding, etc? **NEE/ JA:**
.....

9) Gebruikt u calcium supplementen? **NEE/ JA, namelijk:**

- 500 mg 1x/dag 500 mg 2x/dag
- 1000 mg 1x/dag Calx Plus® keer/dag
- Andere, namelijk: (soort, dosis)

Puntentelling (in te vullen door assistent)

1) Melk: Minder dan 3x/week 0 punten
3-4 keer per week 1 punt
.... keer per dag, x2 punten = punten

→

2) Yoghurt: Minder dan 3x/week 0 punten
3-4 keer per week 1 punt
.... keer per dag, x2 punten = punten

→

3) Kaas: aantal per week x 0.5 punten = punten

→

4) Water: 1 glas/dag 0 punten
2-3 glazen/dag 0.5 punt
4-5 glazen/dag 1 punt
6-8 glazen/dag 1.5 punt
9-10 glazen/dag 2 punten

→

Meer, namelijk glazen/dag x 0.222... punten = afgerond...

→

Contrex/Hépar: glazen/dag x 1 punt = punten

→

5) Appelsienen: stuks/dag x 0.5 punt = punten

→

6) Weinig eten:

Indien NEEN

+3 punten
als beiden voldaan →

7) Groenten, fruit & bruin/grijs brood: Indien JA

Indien JA => calciumcontent opzoeken, zoniet onderschatting

9) Calcium supplementen:

500 mg = 5.5 punten

1000 mg of 2x500 mg = 11 punten

Calx plus® = bonbons x 6.5 punten = punten

→

Totale score:

PollEv.com/eveliengiele858

What is your dietary calcium intake?

- A. < 7 points
- C. 14 – 22 points
- B. 8 – 13 points
- D. ≥ 23 points
